SIXTH CENSUS OF CANADA, 1921

VOLUME II—POPULATION

AGE, CONJUGAL CONDITION, BIRTHPLACE, IMMIGRATION, CITIZENSHIP, LANGUAGE, EDUCATIONAL STATUS, SCHOOL ATTENDANCE, BLINDNESS AND DEAF MUTISM.

F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1925

REPORT ON THE SIXTH CENSUS OF CANADA, 1921

To General His Excellency the Right Honourable Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O.,
Governor General and Commander in Chief of the Dominion of Canada.

MAY IT PLEASE YOUR EXCELLENCY:

I have the honour to lay before Your Excellency the second volume of the Report on the Sixth Census of Canada taken as of date June 1, 1921.

I have the honour to be.

Your Excellency's most obedient servant,

THOS, A. LOW.

Minister of Trade and Commerce.

Department of Trade and Commerce, Ottawa, February 27, 1924.

ERRATUM

In Volume I of the Census the population of the "Institution for feeble minded," numbering 1,143, was included in the town of Orillia instead of in Orillia township, where it properly belongs. This correction has reduced the population of the town of Orillia from 8,774 to 7,631, as shown in this volume.

SIXTH CENSUS OF CANADA-VOLUME II

DOMINION BUREAU OF STATISTICS, CANADA

R. H. COATS, B.A., F.S.S., F.R.S.C., Dominion Statistician E. S. MACPHAIL. Chief Statistician for population

INTRODUCTION

At the Sirth Census of Canada twenty-one reports, pertaining to the population of Canada enumerated as of June 1, 1921, were issued as bulletins from time to time. These bulletins gave the immediately important classifications of the people by age, sex, conjugal condition, education, etc.

In the Introduction to Volume I, will be found a general description of the object and use of a census and particularly of the scope and purpose of the Sixth Gensus of Canada. It contains also an historical summary of census taking from the earliest times, as well as a more particular survey of the several censuses of the Dominion, especially as related to the movement of population and its effect on parliamentary representation. The figures of population in the first volume are presented under two main heads, viz.: (a) the growth and geographical distribution of the population for provinces by census periods from 1871 to 1921 and (b) its distribution by sex, racial origin and religion. A section dealing with the growth of urban and rural localities is also included.

Volume II of the series comprises statistics relating to the composition and characteristics of the population. It expands the statistics covered by bulletins previously issued on the classification of the people according to age, conjugal condition, birthplace, year of immigration, citizenship of the foreign-born, language spoken, mother tongue, educational status, illiteracy, school attendance, blindness and deaf mutism. Each of these subjects is dealt with in as many separate sections and each section is preceded by a table of contents, giving the different headings under which the statistics are presented.

The introductory and explanatory text for all sections is grouped together at the front of the volume and is limited to such explanations as are needed to enable the reader to understand the statistical tables. Practically no attempt has been made at analytical or interpretative discussion of the figures. Such discussion and interpretation will be found in a series of monographs, which will cover the more important fields of census inquiry.

AGE DISTRIBUTION

Ago statistic comprise, one of the most necessary, as well as one of the most difficult divisions of census inquiry. Few fields of economic investigation can be properly explored without reference at one point or another to the age distribution of the population by sex and social condition. While the tables in the section dealing with ages are restricted to the classification of the population by single years of age or by age groups, for makes and females, nevertheless age statistics enter into nearly every phase of population studies. For example, the true incidence of mortality can be determined only when the population on the distributed by age and sex. A knowledge of the age distribution by sex and conjugal condition is necessary in ascertaining birth rates. Statistics of school attendance and illiteracy have value only when age is taken into account. The age distribution of the native and immigrant population is an important factor in determining the economic, social and political effects of immigration.

Errors in age returns.—It is impossible to claim absolute accuracy for census statistics of ages because (1) a considerable number of persons do not know their true age, (2) in a number of instances the enumerator obtained information, relating to the person enumerated, from a third party, either some member of the family found at home, or the proprietor of a hotel or boarding house, who could give the age only approximately, and (3) the age, in certain cases, is intentionally misstated. When the age is not accurately known there is a tendency to state it in years ending with 5 or multiples thereof. For example, the number of persons reported at the ages of 30, 40, 50 or 60 is much greater than the numbers reported for either the years immediately preceding or following.

The number of persons reported at the age following the decennial or quinquennial group when compared with the number at the age immediately preceding would seem to indicate that the round age method of reporting was not due to a desire to misrepresent, but rather because of carelessness, illiteracy, or ignorance of the correct age. It is probable that the degree of inaccuracy is greater for adults than for children or young people.

Age variation.—Three factors, more or less, closely related to the War and resulting consequences (a) fluctuations in the birth rate, (b) cessation of immigration during the var period, and (c) losses occasioned by the war, have seriously influenced the variations in age constitution during the census period, 1911-1921. The following table shows the variations in absolute numbers and in per cent proportion of males and females in the quinquennial age groups 20-24; 25-29 and 30-34 from 1881 to 1921. In the groups 20-24 and 25-29 there were absolute decreases in the number of males of 34,571 and 22,849 respectively from 1911 to 1921. The per cent proportion at these age groups also showed a large failing off for which the war and the influena epidemic of 1918 were largely responsible. The proportion of females in these age groups is also smaller in 1921 than in 1911 excepting in the age group 30-34.

MALES 20-34

| Census | Population of stated ages | | Nu | mber of mak | 18 | Per cent of male population | | | |
|--------|--|---|---|---|---|---------------------------------------|--------------------------------------|--------------------------------------|--|
| years | Total | Males | 20-24 | 25-29 | 30-34 | 20-24 | 25-29 | 30-34 | |
| 1881 | 4, 266, 041 4,770, 123 5,322,238 7,169,960 8,767,206 | 2,159,858 2,428,936 2,721,942 3,795,308 4,518,344 | 211,634 237,144 256,981 385,855 350,984 | 165,339 194,531 216,334 370,494 347,645 | 131,651 163,865 188,125 310,339 343,263 | 9-80 9-76 9-44 10-17 7-77 | 7-65 8-01 7-95 9-76 7-69 | 6-07 6-75 6-91 8-18 7-60 | |

FEMALES 20-34

| Census years | Popula state | tion of d ages | Nuz | nber of femal | es | Per cent of female population | | | |
|-----------------|---|---|---|--|---|--|--------------------------------------|--------------------------------------|--|
| years | Total | Females | 20-24 | 25-29 | 30-34 | 20-24 | 25-29 | 30-34 | |
| 1881 | 4,266,041 4,770,123 5,322,238 7,169,960 8,767,206 | 2,105,183 2,341,187 2,600,296 3,374,652 4,248,862 | 217,771 235,913 251,823 320,435 360,227 | 166, 236 193, 115 207, 051 287, 684 338, 874 | 129,538 155,724 174,942 244,777 309,623 | 10-34 10-08 9-69 9-50 8-48 | 7-89 8-25 7-96 8-52 7-98 | 6-15 6-65 6-73 7-25 7-29 | |

Persons of unknown ages.—For a limited number of persons—in all probability chiefly adults—no age returns were secured in the census. The number of such persons reported in the returns furnishes an index of some value as to the degree of accuracy and completeness of census data. The next table shows the number of persons in every census since 1881 who were returned without a stated age.

| Census | Popula- tion | Perso | as of unstate | d age | Number of persons of unstated age per 100,000 of the population | | | |
|---|---|--|--|--|---|---------------------------------|---------------------------------|--|
| | tion | Both seres | Male | Female | Both sexes | Male | Female | |
| 1881. 1891. 1901. 1911. 1921. | 4,324,810 4,833,239 5,371,315 7,206,643 8,788,483 | 58,769 63,116 49,077 36,683 21,277 | 28,996 31,535 29,768 26,687 11,601 | 29,773 31,581 19,311 9,996 9,676 | 1,358 1,305 913 509 242 | 670 652 554 370 132 | 688 653 359 139 110 | |

Of the total population enumerated in the 1921 Census there were 242 persons in every 100,000 whose age was not reported, as against 500 in 1911; 913 in 1901; 1,305 in 1891 and 1,353 in 1881. If the same ratio of "unstated ages" had been maintained in 1921 as in 1881, there would have been 119,425 persons reported in the last census with age "not given", as against the actual number 21,277.

Comparison with other countries.—The age distribution of the population of Canada in 1921 is compared in the following table with similar data for other countries for the latest year available. The standard of comparison, usually adopted for comparing age distribution, is the population of Sweden, which is comparatively stationary and but slightly affected by immigration.

PROPORTIONS FOR VARIOUS COUNTRIES OF PERSONS LIVING IN EACH QUINQUENNIAL AGE GROUP TO 10,000 PERSONS LIVING AT ALL AGES

| Age groups | Canada (1921) | New Zealand (1921) | Victoria (Austra- lia) (1921) | South Africa (Whites) (1921) | England and Wales (1911) | Sweden (1910- 1911) | Denmark (1910- 1911) | United States (Whites) (1910) | Japan (1918- 1919) |
|--|--|--|--|---|--|---|--|---|---|
| 0-4 5-9 0-14 5-10 0-14 5-10 0-24 0-24 0-24 0-34 0-34 0-34 0-44 0-44 0-46 0-60 0-7 15-79 0-7 15-79 0-9 0-9 0-9 0-9 0-9 0-9 0-9 0-9 0-9 0- | 1,206 1,196 1,042 915 811 783 745 721 601 496 413 320 273 196 134 81 18 5 | 1,061 1,083 997 898 708 788 800 723 574 460 327 260 201 131 87 47 17 | 1, 018 1, 028 936 8548 867 803 684 - 607 536 527 463 351 126 80 455 20 5 | 1,242 1,264 1,213 968 790 603 602 519 404 287 215 147 90 511 92 | 1,069 1,025 970 925 880 854 798 725 619 534 444 354 283 223 215 80 40 14 3 | 1,122 1,033 995 928 828 731 667 581 502 517 475 494 351 305 234 170 91 37 7 | 1, 213 1,101 1,049 925 823 759 698 604 537 472 455 380 319 257 192 123 60 61 1 | 1,142 1,039 970 979 979 979 889 768 702 595 498 436 314 254 190 126 76 36 14 3 | 1, 200 1, 101 1, 029 833 717 717 833 845 435 433 110 90 90 91 111 |
| 00 and over | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 |

The foregoing figures do not furnish comparative data of age distribution for the year 1921, excepting for New Zealand, South Africa and the State of Victoria, Australia. The figures relating to Japan are for a year sufficiently closes to 1921 to make the comparisons valuable. The age distribution of the population of Canada under 55 compares favourably with that of Sweden, but is not so favourable for the age groups 55 and over.

Centenarians.—The number of persons of 100 years of age and over recorded in 1921 and 1911 by provinces is given in the next table. In the census reports of 1891 and 1901 the number of persons 100 years of age and over is included under the heading "95 and over."

POPULATION 100 YEARS AND OVER, 1921 AND 1911

| | | 1921 | | 1911 | | | |
|----------------------------|----------|---------|--------|----------|---------|--------|--|
| Provinces | Total | Male | Female | Total | Male | Female | |
| Canada | 183 | 90 | 93 | 120 | 62 | 8 | |
| Prince Edward Island | 37 | 13 | 24 | 17 | 7 | 1 | |
| New Bruns wick | 8 29 | 4 11 | 18 | 14 21 | 8 | 1 | |
| Ontario | 57 13 | 38 | 19 | 37 | 24 1 | 1 | |
| Saskatchewan | 21 | 11 | .10 | 8 | 1 3 | - | |
| Alberta | ė | 2 | 4 | 11 | 9 | | |
| Yukon N. W. Territories | -1 | - | | 1 | - | | |

The accuracy of the figures in the foregoing statement is corroborated fairly well by the Mortality Report for 1921, when the deaths of 37 males and 35 females of 100 years and over were reported for that calendar year. In 1922 the deaths of 40 males and 23 females over the century mark were reported.

CONJUGAL CONDITION

Definition of terms.—In census statistics the terms "married," "widowed", or "divorced" reto the "marital condition" of the population at the time the census was taken, so that a person who had been widowed or divorced but had remarried would be reported as "married." Persons who are legally separated as to bed and board are included with the divorced.

Margin of error.—In the Fifth and Sixth Censuses, when the conjugal condition of persons of adult age was not reported on the schedule, the record was compiled under the heading "not stated." In the compilations of the Fourth and previous censuses, there is no record of persons for whom the conjugal condition was not reported. In the last census 17,098 persons-9,418 males and 7,680 females, or somewhat less than 2 persons in every 1,000 of the population, were reported without a statement as to their civil condition. Of this number 6,697 persons-3,401 males and 3,296 females—represent the population of certain isolated localities in Ungava, Yukon and North West Territories for which only a count of persons was received. This leaves 10,401 persons-6,017 males and 4,384 females-in the organized parts of the Dominion for whom a record of civil status was not obtained in the census; and the original records show that, with the exception of 610 males and 221 females, this number is made up of returns obtained through the medium of the "Closed House Cards," (1) by which the enumerator was able to obtain a record as to the number of persons, male and female, inhabiting the dwelling, but for whom subsequent efforts to complete the record proved futile owing to the continued absence of the occupants. There are, however, other sources of error which should be taken into account. such as (1) incorrect replies given with intent to deceive; (2) men who have deserted their families may have reported themselves single or widowed; (3) the unmarried mother may have reported herself as married; (4) divorced persons may, in some instances, have been reported as single, married or widowed.

Age and sex.—To make a satisfactory analysis of the conjugal condition of the people at a stated time, a classification by age and sex is required. The several tables, therefore, of the section dealing with the marital condition of the people are shown by age and sex.

The number of persons under 15 years of age who were reported married was only 40—
all females, of whom 32 were Canadian born and 8 Foreign born. For Canadas as a whole, and
for every province excepting Quebec, there was an excess of males over females. This difference
was also apparent among the married population. On the other hand, the number of widowed
and divorced reported were considerably smaller for males than for females. This disparity,
although existing to some degree at each census, was considerably accentuated in 1921 by war
casualties. (Table 26).

The proportion of the unmarried of both sexes to the total of each, sex has decreased from 63-55 per cent for males and 59-71 per cent for females in 1901, to 62-0 per cent for males and 55-737 for females in 1911 and to 59-58 for males and 55-88 for females in 1921. The proportion of married in each sex was greater in 1921 than in 1911 and in 1911 than in 1901. The widowed males in 1901 represented 2-88 per cent of the total male population, as compared with 2-33 in 1911 and 2-64 in 1921. Widowed females were 5-77 per cent of the female population in 1901 5-31 per cent in 1911 and 5-55 per cent in 1921.

Rural and urban communities.—Since there are marked differences between rural and urban communities in regard to the composition and conjugal conditions of their population, separate statistics are given for the two classes of communities in Tables 2" and 28. In consustatistics the population of all cities, towns and incorporated villages, regardless of size, are treated as urban and the remainder of the country as rural. In British Columbia, however, there are certain localities which, although urban in character, are not incorporated and consequently are included with the rural parts. On the other hand, in the middle west, there are communities incorporated as cities having less than 3,000 population, and towns with fewer than 300 persons and villages with fewer than 50 persons and villages with fewer than 50.

Divorced persons.—The total number of divorces granted in Canada since 1881 was 2,365 affecting ordinarily 4,730 persons. The number of divorced persons (including legally separated) reported in the Census of 1921 was 7,401—3,670 men and 3,731 women; in 1911 the divorced (including legally separated) numbered 4,400 persons—2,125 men and 2,275 women.

⁽¹⁾ The purpose of the "Closed House Card" is to enable enumerators in cities and towns to account for every closed bouse or apartment, the usual occupants of which were in temporary residence elsewhere at the date of the ceasus.

BIRTHPLACE

The statistics under this head deal with the classification of the people enumerated in the Sixth Census according to (1) Province of birth of the Canadian born, and (2) Country of birth of the immigrant population.

The information is grouped under four main heads: (1) Comparative figures for the Dominion as whole and for provinces as far back as data relating thereto are available, (Tables 34-38); (2) elassification of the native born population to show province of birth, parental nativity, migration, etc., (Tables 39 to 49); (3) country of origin of the immigrant population, its province of residence in Canada and whether living in urban or rural communities, (Tables 36 and 51); (4) classification according to birthplace of the population, in cities and towns of 7,500 population and over and in country sub-visions. (Tables 52-54).

Comparative data.—Of the total increase in population (1,831,840) from 1911 to 1921 to 1921 chandian born made up 1,213,065 or 76.7 per cent; natives of the British Islands, 220,857, or 13.9 per cent; natives of the British Islands, 220,857, or 13.9 per cent; natives of other British possessions, including born "at nea", 10,338, or 0.7 per cent, leaving 137,550 or less than 9 per cent of the total increase from 1911 to 1921 attributable non-British sources. Of the number added to the population from alien sources, immigrants from the United States supplied 70,344 or more than 50 per ent of the total foreign born increment to population in the ten years 1911 to 1921. The Census of 1911 showed as ten year increase in population of 1,835,328, of which Canadian born contributed 947,857, or 32 per cent; born elsewhere in the Empire, 413,178, or 22-5 per cent and alien born 474,238, or 25-5 per cent.

The per cent distribution of the population according to birthplace, at each census during the past 40 years was as follows: in 1881 in a total population of 4,324.810 the native born was 86-60 per cent, the British born 11-07 per cent and the alien born 2-87 per cent. In 1891 in a population of 4,833,239 the native born was 86-68 per cent, the British born 10-15 per cent. The salien born 3-17 per cent. In 1901 in a population of 5,371,315 the native born was 89-68 per cent, the British born 17-84 per cent and the alien born 5-18 per cent. In 1911 in a population of 7,206,943 the native born was 77-98 per cent, the British born 11-85 per cent and the alien born 10-44 per cent, while in 1921 in a total population of 8,788,483, the native born was 77-75 per cent, the British born 12-12 per cent and the alien born 10-13 per cent.

In 1911 the native born was less than half of the total population reported for Alberta, British Columbia and the Yukon, whereas in no province is the native born less than one-half of its total population of 1921. The alien born, which represented 33-02 per cent of the total population of Saskatchewan, 3s: 13 per cent of Alberta and 26-78 per cent of British Columbia in 1911, dropped to 26-31 per cent in Saskatchewan, to 29-56 per cent in Alberta and do 19-02 per cent in British Columbia in 1921. (Table 35)

Natural Increase.—The net increase in the Canadian born for the 10 years 1911 to 1921 was 1,213,065 or 21 59 per cent, as compared with an increase of 947,897, or 20-39 per cent, in the previous decade. Every province, with the exception of Prince Edward Island, shows an increase for 1921 over 1911 in the number of persons born in the province and living in Canada. From 1911 to 1921 Nova Scotia added by births to the population of Canada 30,614, New Brunswick 33,649, Quebec 326,176, while Ontario by natural increase added 273,237 persons to the population of Canada between 1911 and 1921.

Interprovincial migration of the native born.—While the tables show the extent of the interprovincial movement of the native born population, they do not give any indication of the migration within the same province either from locality to locality or from rural communities to urban centres. This inter-provincial migration often involves greater changes in environment and longer journeys than do interprovincial movements, but there is no way of measuring it by the census. Moreover, the census is given do not show the migration from province to province outside the province of birth. For example, the census records show only the province of thirth and the province of residueue at the time of the census. No account is taken in the census of the number of migrations an individual may have made since leaving his place of birth. It is also obvious that the total number reported born in any province and resident in another province does not represent the total number of persons who migrated from the province of birth to total provinces of the province does not represent the total number of time. The census, being a record of the propure

lation at a given date, affords means only for measuring the direct effects of interprovincial movements of population and its mobility from decade to decade. (Tables 39, 40 and 41).

The following table shows the extent of the migration of the population form in the eastern province to the Prairie provinces and British Columbia. Of the total migration (368,968) from the eastern provinces reported in the 1921 Census, 68:85 per cent took up residence in the western provinces, while out of a total migration (481,363) from the eastern provinces in the previous census, 73:20 per cent were living in the west. The interprovincial invovement of the maritime provinces born has been largely to the extreme west, Alberta and Drivincial hordinary in the that from Quebec and Ontario has been more largely to the middle wost,—Manitoba and Saskatches was.

Distribution of the native born.—The proportion of the population born within the province and residing therein is smaller for all the eastern provinces in 1921 than in 1911, whereas the reverse is true of conditions in the western provinces. Of the population of Canadian birth resident in Manitoba, 75-7 per cent was of local origin in 1921, as against 65-14 per cent in 1911; in Saskatchewan the population of local origin was 62-83 per cent of the total resident native born in 1921 as against 40-95 per cent in 1911; in Mart the population of local origin was 61-74 per cent of the total resident native born in 1921 as against 46-37 per cent in 1911; in British Columbia the proportion of local lorgin was 61-74 per cent of the total resident native born in 1911 to 59-5 in 1921. The per cent distribution of the native born population reported resident in each province according to province of birtish is given in Table 5.

The distribution on a percentage basis of the population born in each province, by province of residence, is shown in Table 40. The table shows for example that of the total population born in Prince Edward Island and resident in Canada \$2-03 per cent remained in the province, 3-82 per cent were living in Nova Scotta, 2-80 per cent were living in Nova Scotta, 2-80 per cent were living in Nova Scotta, 2-80 per cent were living in Nova Scotta, 3-81 per cent were resident in the provinces west of the great lakes.

Nativity of parents of Canadian born.—Of the Canadian born population 71.09 per cent had both parents born in Canada, 10.18 per cent had both parents born deswhere in the Empire, 7.69 per cent had both parents of alien birth. In eastern Canada the proportion of the population whose parents were not native born is relatively small, while in the western provinces it is considerably more than half. In Manitoba 41.74 per cent of the Canadian born population had both parents born in Canada, in Saskatehwan 41.65 per cent, in Alberta 39.43 per cent and in British Columbia 39.21 per cent. It is worthy of note that the native born having both parents Canadian born shows a smaller proportion for persons under 10 years than for those between the ages of 10 to 20 or for 21 and over, whereas the population having both parents alien born shows the heaviest proportion for the population under 10 and the smallest for that of 21 and over. Persons having both parents alien born were 34-08 per cent of the total population of Canadian birth under 10 years in Manitoba, 42-48 per cent in Saskatchewan, 41-26 in Alberta. The proportion of the native born 21 years of age and over having both parents alien born, was 8.5 per cent in Manitoba, 6.4 in Saskatchewan, 4.5 in Alberta and 2.9 in British Columbia.

The native born population is also classified to show those having both parents of the same nativity and those having mixed parentage by racial origin and age. The former group gives the parentage under three heads (a) both parents Canadian born; (b) both parents British born; (c) both parents foreign born; the latter group distinguishes those where one parent was of on nativity and the other of a different one. The statistics are interesting as showing the racial composition of the population in relation to parental nativity. For example, of the Canadian born population of English racial origin, nearly 60 per cent had both parents born in Canada, about 20 per cent had both parents born in the Empire elsewhere than in Canada and about 14 per cent had both parents born in the Simple selection of the Canadian are garden and the selection of the Canadian and the control of the control of the Canadian and the control of the Canadian and the control of the Canadian and the Canadian

Immigrant population.—The immigrant population resident in Canada on June 1, 1921 is classified as regards place of birth under two main divisions (a) British born and (b) alies born. The census figures classifying immigrants according to birthplace do not furnish a true picture of the activant of Canadian immigration or the sources from which it is drawn. For instance many persons who were born in the British Islands or in European countries may have come to Canadia as immigrants from the United States, yet they would appear on the census records as immigrants from the country of birth and not from the country of last residence. Again, the census records arrady report repartiated Canadians. The statistics concerning the former are presented under two heads (1) born in the British Islands, (2) born in British possessions, while the statistics relative to the alien born are given under the following general groups, (1) born in Europs, (2) born in Asia, (3) born in United States, (4) born in other countries. (Tables 50 and 51).

British born.—From 1911 to 1921 the not increase in the population which claimed to have been born in the British Islands wag? -47, as against an increase of 98: 65 per cent in the previous decade. The smallness of the increase shown in the last decade as compared with the previous one was no doubt due to the War, which not only prevented immigration, but called to the colours many persons born in the British Islands who had come to Canada between 1911 and 1914. The following statement gives the number of persons born in the British Islands and resident in Canada by decades since 1871 and the proportion which they form of the total population at each period.

| POPULATION | BORN IN BR | IIIon ioux: | VD3 RESIDE | NI IN OANA | EDIL, TOTT THE | |

POPULATION BORN IN BRITISH ISLANDS RESIDENT IN CANADA, 1871-1921

(1) Ontario, Quebec and the Maritime Provinces only. (1) Includes Lessor Islands and country not designated.

As might be expected, the proportion of the immigrant population of Canada which was born in any of the other overseas Dominions or Colonies is comparatively insignificant, Newfoundland being the chief source of immigration of this class. In 1921, 58 per cent of all immigrants credited to British Possessions were born in Newfoundand.

Of the total number of immigrants reported in the Dominion at the last census 32-31 per even were found in Ontario, 40-67 per cent in the Prairie Provinces, 13-32 per cent in British Columbia, 9-64 per cent in Quebec and less than 33 per cent in the Maritime Provinces.

Ontario claimed more than 43 per cent of the British-born immigrants reported in the census; the Prairie Provinces about 29 per cent; British Columbia 15 per cent; Quebec S 4 per cent and

the Maritime Provinces less than 4 per cent. The Prairie Provinces became the home of 54 per cent of all the foreign born reported in the Sixth Census; 20-5 per cent of the total were reported in Ontario; British Columbia and Quebec had each a little better than 11 per cent, while less than 3 per cent were residents of the Maritime provinces in 1921.

Foreigh Born.—The classification of the foreign born population according to birthplaces has been made on a post-war basis, the statistics of 1901 and 1911 having been re-compiled to correspond with the territorial re-arrangements consequent from the World War, 1914-1918. The following statement above the various transfers of territory between 1910 and 1920 due to the War which had to be taken into account in constructing tables that would give fairly accurate comparative statistics of country of birth of the alien born population of Canada in 1901, 1911 and 1921. In order the more readily to locate the countries affected by the changes, they are arranged by accorational crouss as follows:—

NORTHWESTERN BUROPS

Belgium.—Annexation of towns of Eupen and Malmedy from Germany.

Denmark.—Annexation of Northern Schleswig from Germany.

France.—Annexation of Alsace-Lorraine from Germany.

CENTRAL AND EASTERN EUROPE

Austria.—Annexation of territory from Hungary. Detachments of territory to Czechoslovakia (q.v.) Augustia (q.v.), Rosmania (Bukowina), and Italy (Trentho region, Gorizia, Istrian peninsula, and Trieste); and detachment of Fizme (free state; see "Other Europe").

Bulgaria.—Detachments of territory to Greece (Bulgarian Thrace) and Jugo-Slavia (ceded territory includes towns of Strumitsa and Tsaribrod).

Czechoslovakia.—Created from territory formerly included in Austria-Hungary (Bohemia, Moravia, Ruthenia, and Slovakiand).

Germany.—Detachments of territory to France (Alsace-Lorraise), Belgium (Espea and Malmedy), Poland (West Prusia and Poesay), and Disensark (Northers Schlewsig) and of Sanza Basis (now governed by a Commission of the Lasgue of Nations; see "Other Europe") and of Danzig (free city; see "Other Musery.—Detachments of territory to Austria. Czelchowskis (Rutheria and Slovakiand).

Hugary.—Detachments of territory to Austria, Czechoslovakia (Ruthenia and Slovakland), Roumania (ceded territory includes Transylvania and part of Banat), and Jugo-Slavia (q.v.). Jugo-Slavia—Created from territory formerly constituting Servia and Monteagor and from territory formerly included in Austria-Hugary (Carniola, Dalmatia, Creatia, Slavonia, part of Banat, Bosnia, and Heragovina) and Bulgaria (ceded territory includes towns of Strumitis and Tarnibrod).

Lithuania.—Formerly included in Russia.

Poland.—Restored to its original status as an independent country by reuniting Austrian Poland (Galicia), German Poland (West Prussia and Posen), and Russian Poland.

Roumania.—Annezations of territory from Austria (Bukowina), Hungary (Transylvania, part of Buant, and other territory), and Russia (Bessarabia). Russia.—Detachments of territory to Foliand (Russian Poland) and Roumania (Bessarabia) and

detachment of Lithuania.

Turkey In Europe.—Detachment of territory to Greece (Turkish Islands of the Aegean, Turkish Thrace and Smyrna) and detachment of Albania.

SOUTHERN EUROPE

Albania.—Formerly included in Turkey in Europe.

Greece.—Annexations of territory from Bulgaria (Bulgarian Thrace) and Turkey in Europe (Turkish Islands of the Aegean, Turkish Thrace, and Smyrna).

Italy.—Annexation of territory from Austria (Trentino region, Gorizia, Istrian peninsula, and Trieste).

Danzig.-Free city; formerly included in Germany.

Fiume.—Free state; formerly included in Austria.

Saar Basin.—Under government of a Commission of the League of Nations; formerly included in Germany.

Armenia.-Formerly included in Turkey in Asia.

Palestine .- Formerly included in Turkey in Asia.

Syria.-Formerly included in Turkey in Asia.

Turkey in Asia.—Detachment of Armenia, Palestine, and Syria, and detachment of Hedjaz (now included in "Other Asia").

Other Asia .- Includes Hedjaz, formerly part of Turkey in Asia.

In the census all persons born outside of the Empire are classified as foreign born. Of the 809,822 persons of foreign birth enumerated in the last ensus, 459,232 or 51-6 per cent were born in European countries, 53,636 or 6 per cent in Asia, 374,024 or nearly 42 per cent were born in the Illieid States.

Of the total immigrant population resident in Canada 45.52 per cent were of alien origin in 1921, as compared with 47.43 per cent in 1911 and 39.81 per cent in 1901.

The proportion which the foreign born population of Canada formed of the total population at each census since 1831 is relatively small, being 2-87 per cent in 1881, 3-17 per cent in 1891, 5-18 per cent in 1901, 10-45 per cent in 1911 and 10-13 per cent in 1921. Although the proportion of foreign born to the total population was smaller in 1921 than in 1911, nevertheless there was an actual increase of 137,550 in the number of the foreign born during the decade—the totals being 78,732 and 890,322 in 1911 and 1921 respectively.

The European born constituted 23-49 per cent of the total immigrant population in 1921, as compared with 25-52 per cent in 1911 and 17-95 per cent in 1901. To the number reported born in Poland (29,279) in this report, there should be added 38,025 born in Galicia, which from October 19, 1918, to July 16, 1919, war an independent republic, but since the latter date has been occupied by Poland. This gives a total of 65,304 persons resident in Canada whose birthplace was within the confines of the republic of Polands as now constituted.

In the last ceasus 433,615 persons, or 54-32 per cent of the total foreign born (890,322) were living in rural localities and 406,677 or 45-58 per cent in urban centres. Immigrants from Norway, Sweden, Denmark and Galicia are found more largely in rural communities than in urban ones. On the other hand only a small proportion of persons born in Greece (10-67 per cent), in Italy (24-19 per cent) or in Poland, exclusive of Galicia, (32-70 per cent) are found outside of cities or towns. The great majority of Asistics resident in Canada are dwellers in cities and towns, the only exception being the Japanese immigrants, of whom 61-84 per cent resido in communities outside of cities and towns. The greater number, however, of Japaneses so classified are engaged in truck gardening in subruban centres and in fishing on the Pacific coast.

YEAR OF IMMIGRATION

The inquiry as to year of immigration furnishes a basis for a comparison of the distribution by rovinces of the immigrant population.—British born or Foreign born,—by year of arrival in Canada. It also provides a means for determining what proportion of the immigrants who arrive during a given period, as shown by immigration statistics, were still alive and resident in Canada at the census date.

Of the total immigrant population (1,985,736) reported in the last census, 54-48 per cent (1,068,544) were from the Brittish lales or from some of the overease Dominions, and 45-52 per cent (880,282) from foreign countries. For every period excepting the years 1915-1918, British immigration made a greater annual contribution to the population enumerated at the last census than that from all other countries. During that period the ratio of British to Foreign immigration was about 35 to 65 of every 100 persons arriving, while of the foreignborn arrivals, immigrants from the United States constituted 71 per cent of the total.

As the figures of the Census of 1921 abow the number of immigrants arriving by certain periods of years, the statistics compiled from the returns of previous censuses, owing to death and emigration, have little value for making comparisons with the present census and are therefore not shown. It may, however, be pointed out that in 1901 the total immigrant population resident in Canada numbered 699,500 or 13 per cent of the total population of 5,371,315; in 1911 it numbered 1,586,961 or 22 per cent of the total population of 7,206,643 while in 1921 it was 1,955,756 or 22-2 per cent of the total population of 7,378,483. About 55 per cent of the total immigrant population reported at the last census had come to Canada before 1911.

The foreign-born immigrants constituted 5-2 per cent of the population of the Dominion in 1901, 10-4 per cent in 1911, and 10-1 per cent in 1921. Of the total number of immigrants living and reported at each census, those of alien birth formed nearly 40 per cent in 1901, about 48 per cent in 1911 and about 463 per cent in 1921. Of the foreign-born reported in the last census 15-37 per cent had immigrated before 1907, 55-38 before 1911. More than 81 per cent of the foreign-born immigrants reported in 1921 had come to Canada before 1914. (Tables 56-59).

CITIZENSHIP OF THE FOREIGN-BORN

Inquiry as to citizenship of the foreign-born population living and resident in the country on the census date has been made at each decennial census since 1901. The information concerning citizenship was collected in 1921 under the following instruction,-

"His proper to use 'Canadian' as descriptive of every person whose home is in the country and who has acquired rights of citizenship is it. A person who was born in the United States, or France, or Germany, or other foreign country, but whose home is in Canada and who is a naturalized citizen, should be cattered as 'Canadian'; so also should a person born in the United Kingdom or any of its colonies whose residence in Canada is not merely temporary. An alien person will be classed by nationality or citizenship according to the country of birth, or the country to which he or she professes to owe allegiance.

"A married woman is to be reported as of the same citizenship as her husband.
"A foreign-born child under 21 years of age is to be reported as of the same citizenship as the parents

The fact that foreign-born persons coming to Canada within five years (the length of residence in Canada required to obtain naturalization) preceding the date of the census are reported as of "Canadian citizenship" is explained by the foregoing "Instructions" to enumerators, which were based on the provisions of the Naturalization Act of 1914, which provides that the following persons shall be deemed to be naturalized British subjects, namely:

(a) "Any person born within His Majesty's dominions and allegiance; and (b) "Any person born out of His Majesty's dominions, whose father was a British subject at the time of that person birth and either was born within His Majesty's allegiance or was a person to whom a certificate of naturalization had been graated; and (c) "Any person born on board a British ship whether is foreign territorial waters or not."

Provided (1) "that the child of a British subject, whether that child was born before or after the passing of this act, shall be deemed to have been born within His Majesty's allegiance if born in a place where by treaty, capitulation, grant, usage, sufferance, or other lawful means, His Majesty exercises jurisdiction over British subjects."

(2) "The wife of a British subject shall be deemed to be a British subject."
(3) "A woman, who having been an alien, has by or in consequence of her marriage become a British subject, shall not, by reason cally of the death of her husband or the dissolution of her marriage, cease to be a British subject.

It may also be pointed out that the participation of Canada in the Peace Treaty and in the League of Nations has made it necessary for an official definition of Canadian nationals and of Canadian nationality to be made for the first time in Canada, since among different measures adopted in connection with the operations of the League were provisions defining certain rights and privileges to be enjoyed by the nationals of members of the League. A Canadian national was accordingly defined by 11-12 Geo. V, chap. 4, as-

(a) "Any British subject who is a Canadian citizen within the meaning of The Immigration Act, chapter twenty-seven of the statutes of 1910, as heretofore amended;
(b) "The wife of any such citizen:

(b) I no wife of any secur cutzers;
(c) "Any person born out of Canada, whose father was a Canadian National at the time of that person's birth, or with regard to persons born before the passing of this Act, any person whose father at the time of such birth, possessed all the qualifications of a Canadian National, as defined in this Act.

Of the total foreign-born (890,282) in Canada at June 1st, 1921 only 697,634 or 78.4 per cent had attained their majority and could exercise the right of choice in acquiring citizenship, and of these there were a certain number whose period of residence in Canada was not sufficient to permit their attaining the status of Canadian citizenship. Of those under 21 years of age (192,648) 111,099 or 57-6 per cent had acquired citizenship as a result of the provisions of the "Naturalization Act" in regard to minors—children, who were born in the homeland to parents who since immigration have become naturalized Canadians. or, who were born to British nationals in a foreign country. The wives, also, of British or Canadian nationals whether over or under 21 years of age, without reference to length of residence in Canada or in other British Dominions, were reported as naturalized according to the law governing such cases.

Voting strength of the naturalized foreign-born.—The voting strength of the total naturalized foreign-born population, male and female, 21 years of age and over resident in Canada June 1st, 1921 forms only about 8-4 per cent of the total possible vote of the electorate of Canada. In Saskatchewan the naturalized vote constituted 29 per cent of the total number entitled to vote at federal elections, 27 per cent in Alberta, 19 per cent in Manitoba, 10 per cent in British Columbia and less than 4 per cent in Ontario, about 3 per cent in Quebec and nearly 2 per cent in the combined vote of the Maritime Provinces at the census date.

Owing to changes in national alignments in Europe as a result of the World War, strictly accurate comparisons with pre-war censuese is a to the classification of the foreign-born in Canada according to country of birth are not possible. Table 66, however, furnishes a rough idea on a pre-war basis of the number living and resident in Canada in 1901, 1911 and 1912 who claimed the specified countries as their place of birth, together with the number and percentage of those who had accurited the rights of Canadian citizenship.

In 1901 there were 278,449 foreign-born persons in Canada of whom 153,908 or 55-3 per cent had completed the necessary steps to acquire the rights of citizenship in Canada; in 1911 the foreign-born numbered 752,732 of whom 344,557 or 45-5 per cent reported themselves as Canadian citizens, while out of a total of 890,282 alien born in 1921, 514,182 or 57-8 per cent had become Canadian Nationals.

LANGUAGE SPOKEN AND MOTHER TONGUE

The inquiry respecting "Language Spoken" and "Mother Tongue" on the population schedule in the Sixth Census of Canada, 1921, required an answer from every person 10 years of age and over to three questions: (a) Can you speak English (b) Can you speak French and (c) Language other than English and French spoken as "Mother tongue".

Language spoken.—The language spoken by the various races or peoples 10 years of age and over which made up the population of Canada at June 1, 1921, is presented in Tables 74 to 79 under two main heads "British born" and "Foreign born," the former comprising all persons born within the Empire, while the latter refers to those of alien birth. The statistics show for these two classes of the population the number and per cent proportion of persons, male and female, of each racial origin who speak (1) English only (2) English and French only, (3) Fracies only, (4) English and a mother tongue, (5) French and a mother tongue, (5) English and French and a mother tongue or (7) Mother tongue only, for provinces and for cities and towns of 15,000 and over.

For Canada as a whole 84.79 per cent of the total population 10 years of age and over could spack English. This proportion was distributed as follows: 85.61 per cent spoke English and 16.09 per cent apoke English and French, 0.49 per cent spoke English and French, 0.49 per cent spoke English and French about \$4 of one per cent or 43,70° persons were reported as being able to speak English and French in addition to the language of their rucial group. (Table 78). Those who were reported as speaking French only (877,544) constituted slightly over 13 per cent of the total population and of these 92.2 per cent were in the Province of Quebec, 3.5 per cent in New Brusswick and 2.6 per cent in Ottal Province Size of the Size

As previously stated, English is used exclusively by 58-61 per cent of the total population of Canada 10 years of age and over. In Prince Edward Island 85-27 per cent of the population of this age are restricted to English as a means of communication, compared with 86-42 per cent in Nova Scotia, 82-19 per cent in Ontario, 73-99 per cent in British Columbia, 67-65 per cent in New Brunswick, 66-20 per cent in Alberta, 61-07 per cent in Manitoba and 85-59 per cent in Saskatchewan, while nearly 12 per cent of the population of this age group in Quebec gave English as their only language.

Of the British born nearly 94 per cent of those reported as being unable to speak English are of French origin largely residents of Quebec province. Of the total foreign born population 10 years of age and over (850,249), 192,398 were of British races, and 657,851 of other races, and of the latter about 15 per cent were reported as being unable to speak English. (Tables 74 and 75).

It is worthy of note that females of nearly every racial origin appear to have acquired the language of the country of their adoption more slowly than males. This is, probably accounted for by the fact that men more largely than women are employed in pursuits which bring them more intimately in touch with persons speaking English or French.

93637-a

Mother Tongue.—As previously stated, the enumerator was directed to obtain, in connection with "Language Spoken," a record of the "Mother tongue" of the population. "Mother tongue" was defined as the "language of customary speech employed by the person." The information elicited under this heading on the census schedules has been compiled for the population lation (exclusive of Indians) 10 years of age and over for Canada by provinces.

In view of the numerous changes in the map of Europe, following the War, it was not possible to make an accurate classification of "Mother tongue" according to birthplace, consequently it was decided to give the statistics of mother tongue in relation to the racial origin of

the population 10 years of age and over for each province. (Tables 80 and 81).

In most instances the classification by mother tongue may be taken as indicative of ethnic groups. The principal exception to this rule is in the case of persons reported as of English mother tongue. Under this head are included such widely different ethnic groups as English, Irish, Scotch and Welsh. While English as a mother tongue thus covers more than one racial group of people the opposite is true of Yiddish, which is reported as the mother tongue for only a part of the Hebrews, the others being reported as speaking Polish, Russian, German English, etc.

There are also many instances where English is given as the mother tongue of persons whose ethnic stock may have originated in some European country. For example, English was reported as the mother tongue of more than 63,000 persons of Dutch origin, of over 101,000 persons of German descent, and of more than 8,000 each of Norwegians and Swedes. For further exceptions

where the mother tongue reported is not indicative of the ethnic stock, see Table 81.

Of the total population of the nine provinces 62.16 per cent gave English as the language of customary speech and 26.64 per cent French, 2.98 per cent German and 2.84 per cent one of the Slavic tongues. English was given as the mother tongue of 88 · 40 per cent of the population 10 years of age and over in Nova Scotia; 87:16 per cent in Prince Edward Island; 84:87 per cent in Ontario; 80:02 per cent in British Columbia; of 70:27 per cent in New Brunswick and 69.79 per cent in Alberta, of 64.48 per cent in Manitoba and of 61.08 per cent in Saskatchewan. In Saskatchewan German was given as the mother tongue of 13.35 per cent of the population 10 years of age and over. In Quebec, French is the mother tongue of more than 79 per cent of the population 10 years of age and over.

EDUCATIONAL STATUS

Scope and nature of inquiry.—The information upon which is based the statistics relating to the "Educational Status of the population" was compiled from the replies returned to two questions on the population schedule under the headings (1) "Can read" and (2) "Can write" and the corresponding instructions for collecting the information were as follows:-

"If the person can read any language the question will be answered in column 26 by writing 'Yes,' and by 'No if unable to read."
"If the person can write in any language the question will be answered in column 27 by 'Yes,' and

by 'No' if unable to write.

For earlier censuses of Canada the statistics obtained from these questions on the census schedules were presented under one head-Literacy, and had reference to the total population 5 years of age and over. In this census they are presented under two heads, "Educational Status" and "Illiteracy". Tables 82 to 92 present the statistics relative to the former, while Tables 93 to 99 give the figures concerning the latter.

In order to maintain a line of comparisons with the statistics of previous censuses relative to the educational standing of the people as disclosed by the answers furnished on the census schedules, these statistics are presented in Tables 85 to 87 for the population 5 years of age and upwards by sex and by certain broad age groups. In Tables 88 to 91 they are presented for the population 10 years of age and over by sex, certain age groups and nativity, by provinces.

The presentation of these statistics for the population 10 years of age and over possesses the advantage that the results have a close bearing on school attendance and are also more generally

comparable with the statistics of other countries.

It may be necessary to remind the reader that the figures under this heading do not indicate the degree of learning possessed by the persons represented in census results. In so far as the enumeration records are concerned the persons may not have been able to read the current news correctly or intelligently, while their ability to write may have been limited to name signature.

ILLITERACY

The statistics concerning the illiteracy of the population 10 years old and upwards are presented in Tables 33 to 99 for Canada as a whole, and by provinces, counties or ceasus divisions and cities and towns of 10,000 population and over. In general, the illiterate population, as shown by the census figures, should be understood as comprising persons having no education.

Margin of error.—It is possible that census statistics may understate the total number of illiterates, particularly among the adult population, with whom there may be an unwillingness to admit inability to read and write. It may also be doubted whether those who are returned as being able to "read" only should not be classed as illiterate. Furthermore, in parts of the country where practically all are able to "read and write" the enumerators are likely to acquire the habit of entering them as "literate" without the formality of an inquiry. In this way a few cass of illiteracy may be overolocide. On the other hand, it is also possible that persons who were unable to speak one or other of the official languages were recorded by some enumerators as being unable to "read and write" although the "Instructions" made it clear that ability to read and write in any language was the criterion upon which the record should be made. However, as the same conditions are likely to have controlled the making of the record in previous ensusses, the figures supply a sufficiently sound basis by which to measure the decrease in illiteracy from decade to decade.

Hilteracy by age groups.—The extension of educational opportunities from decade to be decade is brought out in the statistics of illiteracy by age groups. The illiteracy of each age group indicates the lack of educational facilities during the childhood of the group. The improvement in educational advantages in each province may be measured generally by noting the percentage of illiteracy in each age group. For instance, in the Canadian born the liliterates in age group 10-20 was 2-47 per cent, as compared with 3-15 per cent for the age group 21-34 years, 6-24 per cent in the group 3-5-64 years and 14-44 per cent for the population 55 years and over. The "Foreign-born" show a much greater disparity between the percentage of illiteracy in the younger and older age groups than do either the Canadian born of British born. For the Foreign born under 21, about 3-9 per cent were unable to read and write, while of those 65 and over 22-71 per cent were reported as illiterate.

Hilteracy, Canadian born, by nativity of parents.—The illiteracy of the Canadian born population classified according as both or either of the parents were "Canadian born," "British born" or "Foreign born" is dealt with in Tables 94, 95 and 96. Table 94 gives the number and per cent proportion of illiterates in the age groups 10-20 and 21 and over, classified according to nativity of parents. Table 99 shows the illiteracy by the same groupings for age and parentage in cities of 10,000 and over.

Hilteracy of voting population.—There were in the nine provinces, exclusive of Indians, 4,700,815 persons 21 years of age and over in 1921, of whom 201,575 or 5-49 per cent were illiterate. The highest percentage of illiteracy (8-37 per cent) for this class of the population was in New Brunswick, followed by Quebec with 7-07 per cent and Manitoba with 7-07 per cent illiterate. The following statement summarizes by provinces the number and per cent proportion of illiterates in the population 21 years of age and over in 1921.

The illiteracy of the population 10 years of age and over, classified as British born (including Canadian born) and Foreign born by sex and age groups according to certain racial origins, is given in Table 98

The educational status of the Indian population is treated separately in Table 99 by sex and age groups. These statistics are included in the total of all tables except Table 98.

SCHOOL ATTENDANCE

The statistics of school attendance as compiled from the records of the 1921 Census are been dupon answers to a question on the population schedule as to whether persons between the ages of 5 and 29 years had attended school for any length of time between September 1,1920, and the date of the Census, June 1, 1921. The instructions to enumerators on this point read as follows:—

"If the person has attended a school or other institution of learning for any period from September 1, 1920, to lune 1, 1921, the time will be indicated by writing the number of months which the person spent at school or other institution of learning in the proper column; but if the person has not attended school for any part of this period, the fact will be indicated by a dash, thus (-)."

For the sake of simplicity the school years are referred to as 1901, 1911 or 1921, as the case may be.

In 1911 the census instructions called for the school attendance of all "persons over 5 years of age." It was found, however, that the enumentors had so repeatedly recorded the school attendance of children of 5 years of age that for the Sixth Census it was decided to instruct the enumerators to obtain this information for the population between the ages of 5 and 20. The statistics, however, are presented in such a way for both censuses that the figures of school attendance for children of 5 years of age may be omitted for any value which may be desired.

Provincial laws governing school attendance.—As a general rule comparison between provinces as to school attendance can be made only for the age period 7 to 14, which coincides very closely with the age of compulsory school attendance in all the provinces, which is as follows:—

Prince Edward Island.—Ages 7 to 13, inclusive; monthly attendance must be sixty per cent of the days schools are in operation.

Nose Scotia—Ages 7 to 14 in rural schools: goes 8 to 16 in towas and cities. Within the age limits, children in towa and country schools must attend regularly: must be reported for discipline when 5 days absent; and parents and guardians in addition to fines may have 2 cents a day added to their taxes for each absence to compensate the section for the loss of the "attendance" portion of the runnicipal school fund.

New Brunswick (on resolution of trustees, but the question must be brought up at every annual meeting until adopted).—Ages 7 to 12 or grade VII standing; in St. John, Chatham and Newcastle, 6 to 14; period eighty full days. Employment of children under 16 may be forbidden by board.

Quebec .- No compulsory regulations.

Onterio.—
(a) Children 8 to 14 must attend full time; children from 5 to 8, if enrolled must attend full time to the end of the school term for which they are enrolled.

the end of the school term for which they are envoled.

(b) Adolescents H to 16 who have not attained a university matriculation standing must attend full time; those exempted on the plea of circumstances compelling them to go to work must attend part time for 400 hours a year in municipalities where part-time courses are provided. This provision came into force in September, 1921. Since September, 1922, urban municipalities with a population of 5,000 and over are required to growing part them courses.

(c) Adolescents 16 to 18 who did not attend full time to sixteen and have not attained a university matriculation standing must attend 320 hours a year.

Manitobs.—All children between 7 and 14 who have not attained entrance to high school must attend

tell time. Any pupil over 14 if carolled must attend regularly. A child over 12 may be exempted for graphoyment, but only at weeks in the term. Employment under 14 (except as mentioned) is forbidden. The board of any district having an attendance officer may compel children to attend up to the age of 15. Employment of the children under 15 is forbidden. Deep must be present the ages of 16 may 16 must attend an

institution seven months in each year.

Alberta.—All children 7 to 15 must attend full time.

British Columbia.—All children between 7 and 14 inclusive must attend full time during the school year.

While the foregoing constitutes in a general way the ages of so-called "compulsory attendance," yet there are provisions in the school laws of nearly every province; such as

responsibility for a minimum average attendance, generally applicable to children between the ages of 6 and 16; "Adolescent Attendance Acts" etc., which tend to widen the period of "school age" within which neglect to keep children at school subjects the parent or guardian tor-penalties of varying degrees of severity.

Comparative data.—The statistics of school attendance for the population between the ages of 5 and 19 years of age are presented for 1901,1911 and 1921 in Tables 100 and 102 for Camado, as a whole. In comparing the statistics of school attendance for the Census of 1921 with those of 1911 and 1901, some things must be taken into account. In 1921, as stated in the "Instructions to Enumerators", the record of school attendance covered the nine months ended May 31, 1921, 1921, while in 1911 the period of school attendance and reference to the calendar year 1910; in the 1901 Census it had reference to the census year ended March 31, 1901; moreover, the records for 1901 were compiled and published only for the age groups 5: 0, 9, and 10 to 19 years.

In the 1921 census the population 5 to 19 years of age numbered 2,763,728, or 31.5 per cent of the total population of stated ages (8,767,206), as compared with 2,163,937 or 39.5 per cent in a population of 7,169,960 of stated ages in 1911 and 1,748,741, or 32.8 per cent in a population of 5,322,338 of stated age in 1961.

In 1901, 52:13 per cent of the population 5-19 years of age (1,748,741) attended school for some period; in 1911 there was a slight improvement, the percentage rising to 52:8 8pr cent of the population of this age (2,163,937), while in 1921 the propertion of the population (2,763,728) in this age group attending school rose to 61:32 per cent, being a betterment of nearly 89 per cent for the population 5 to 19 over that of the previous census. It is also worthy of note that the percentage of school attendance of males 5 to 19, which showed a falling off from 1901 to 1911, increased from 52:15 per cent in 1911 to 60.79 per cent of the total in 1921. The proportion of the female population 5 to 19 reported attending school for any period rose from 51:90 per cent of the total in 1921.

For Canada (exclusive of Yukon and Northwest Territories), out of every 1,000 childron, 7 to 14 years of age, 888 attended school for some period in 1921, as against 788 in 1911. Pechage the improvement in school attendance in the decade will be more evident if it be noted that the number of children (7-14) not attending school was reduced from 220 per 1,000 in 1911 to 114 in 1921. The betterment in school attendance shown for Canada as a whole is reflected in each of the provinces. In 1911 Prince Edward Island held the premier position with 84 09 pre cent of the population 7-14 at achool; in 1921 the first position goes to Ontario with 91-48 per cent of the population 7-14 at school for some period in the year, followed by British Columbia with 90-02 per cent. The greatest improvement in school attendance is shown by the Peniric Provinces and the smallest by the Maritime Provinces, but this largely due to the fact that in 1911 Prince Edward Island, Nova Scotia and New Brunswick each showed a school attendance of better than 50 per cent, whereas Alberta reported an attendance of less than 63 per cent, schemes alberta reported an attendance of less than 63 per cent, schemes alberta reported an attendance of less than 63 per cent, whereas Alberta reported an attendance of less than 63 per cent, whereas Alberta reported an attendance of less than 63 per cent, whereas Alberta reported an attendance of less than 63 per cent, whereas Alberta reported an attendance of less than 64 per cent and Manitoba had a school attendance of alightly more than 74 per cent of the population of compulsory school age.

Excluding Indians there were 2,728,524 persons between the ages of 5 and 19 years inclusive in Canada (Territories excluded) of whom 88.5 per cent were Canadian born, 5.6 per cent the British born and 5.9 per cent foreign born. Thus, more than 94 per cent of the population in this age group were born within the empire. Of the Canadian born 62.93 per cent attended school for some period in the year, of the British born, 49.77 per cent, and of the Foreign born, 54.75 per cent. The school attendance of each class was distributed as follows,—Reported at school 1 to 3 months, Canadian born 2.65 per cent, British born 1.27 per cent, Foreign born 3.30 per cent; attending 4 to 6 months, Canadian born, 4.75 per cent, British born 2.93 per cent Foreign born 4.95 per cent; attending school 7 to 9 months, Canadian born 5.52 per cent, British born 45.57 per cent and Foreign born 43.77 per cent. In every period of school attendance, for Canada as a whole, the proportion of the native born is well in excess of immigrant children. The school attendance of each sex is fairly level with a slight advantage in favour of females.

The following statement summarizes by provinces the number and proportion of the population 7 to 14 years in each province, exclusive of Indians, who attended school for any period, and of those who attended for a full term. Of the 1,508,846 children 7 to 14 years of age in the nine provinces (Indians excluded) 89-10 per cent attended school for some period and 80-25 per cent were at school from 7 to 9 months in the school year. New Brunswick, Quebec, Nova Scotia and Prince Edward Island, in the order named, show the largest proportion of children of compulsory school age as not having attended school.

Of the total number (1,344,371) of children 7 to 14 years of age who were reported as having attended school for any period during the nine months September 1,1920 to June 1, 1921, more than 90 per cent showed an attendance of 7 or more months. The highest percentage of attendance for this period is claimed by British Columbia with 94-61 per cent, followed by Quebec with 94-50 per cent and Ontario with 94-70 per cent. Prince Edward Island, New Brunswick and Saskatchewan each report an attendance for 7 or more months of less than 80 per cent of the children in this age group who were enrolled.

For children 5 years of age, Ontario, Quebec and Nova Scotia, in the order named, show the greatest percentage attending school, while the smallest percentage is in British Columbia, followed by Alberta, Manitoba and New Brunswick. The percentage of males to females attending school is taily equal for every age group excepting in the 15-19 group, where the proportion is 23 per cent of the total males of this age, as against 26-78 per cent of females. The percentage of school attendance for children under 6 years was slightly smaller for males in 1921 than in 1911, while that for females was somewhat higher. The percentage of attendance of children 6 to 9 years has increased from 70-91 per cent for females in 1911 to more than 79 per cent for behaves and 70-59 per cent for females in 1911 to more than 79 per cent for behaves and formales in 1921. The 10 to 14 group has also increased its attendance from 79 per cent for females of 89 per cent for females to 89 per cent for females and 80 per cent for females to 89 per cent for females to 89 per cent for females to 89 per cent for females and 80 per cent for females to 89 per cent for females to 80 per cent for femal

The proportion per cent of children 7 to 14 years of age, enrolled in rural and urban achools, who attend school for 7 or more months in 1921 by provinces was as follows: Prince Edward Island, rural 74-91 p.c., urban 95-30 p.c.; Nova Scotia, rural 79-85 p.c., urban 96-67 p.c.; New Brunswick; rural 72-23 p.c., urban 96-77 p.c.; Quebec: rural 91-91 p.c., urban 96-77 p.c.; Ontario: rural 89-84 p.c., urban 96-85 p.c.; Manitoba: rural 84-20 p.c. urban 96-83 p.c., urban 96-40 p.c.; Saskatchewan: rural 67-30 p.c., urban 95-41 p.c.; Alberta: rural 69-88 p.c., urban 96-40 p.c.; British Columbia, rural 92-25 p.c. urban 96-55 p.c.

It is, however, necessary to note that under the heading "rural" in British Columbia are included many municipalities which, owing to density of population, are urban in character, whereas in the Prairie Provinces many places of fewer than 100 people have legal status as "urban" entities. As the provinces do not have a uniform standard for erecting villages, towns or cities, the census rule is to regard as "urban" the population of cities, towns and incorporated villages and the remainder of the country as "urual"

THE BLIND AND DEAF-MUTES

The last section of this volume presents the statistics relative to the "Blind", the "Deaf-Mutes" and the "Blind-deaf-mutes" reported in the Sixth Census of Canada taken as of June 1, 1921

The Census reported 4,396 blind persons, 5,334 deaf-mutes and in addition 42 persons who were blind-deaf-mutes, a total of 9,772 for the three classes in the Dominion at the date of the census. Of the blind 2,508 were males and 1,888 females, while of the deaf-mutes 2,850 were males and 2,484 females. While the general tables in the main correspond with those of the Census of 1911, there was a difference in the manner in which the information was collected in 1921 as compared with that of previous censuses. In the census of 1911 and previously special columns were provided on the population schedule for this information; in the last Census the questions relating to blindness and deafmutism were omitted from the main population schedule, and the enumerators were supplied with a special form on which to report the name, age, sex and post office address of the blind and of deaf-mutes with a reference to the page and line on the population schedule where the person was recorded with his or her family data as required by the Statistics Act.

Definition of terms.—In 1921 the Instructions to Enumerators, which were printed on the supplemental schedule on which the enumerators made their report, read as follows:—

"Blind—Include as Blind may person who cannot see well easuan to read even with the aid of glasses. The test in the case of infants and generally for persons under it must be whether they can distinguish forms and objects; the same test should be applied to older persons who are illiterate. Do not include any person who is blind in one eye only."

"Deaf-mutes.—Include as Deaf-mutes (1) any child under 8 years of age who is totally deaf and (2) you older person who has been totally deaf from childhood. In general make a record of only persons who cannot hear nor talk."

The enumerator was further instructed that the names of all persons recorded on the special sedule must also appear on the population schedule, with the facts required thereon carefully entered.

Accuracy of data.—It is probable that the number of individuals who have been reported as blind or dead-mutes is slightly understated owing to relutatine of parents or of relatives of persons suffering from these infirmities to declare the facts voluntarily, particularly if the blindness or desfiness was congenital. Notwithstanding the admitted natural tendency to hide these facts, the records of enrolment at the different institutions for the blind or desf-mutes appear to corroborate the census figures. In the school year 1920-21 there were 425 blind persons and 1,094 deaf-mutes receiving instruction at the various institutions for defectives of these classes, and assuming that they were all between the ages of 10 and 24 years, they compare favourably with the census figures which showed 527 blind and 1,766 deaf-mutes in the same age category. While these figures do not necessarily prove the accuracy of the census enumeration, they nevertheless indicate that the enumerators were diligent in procuring all the personal data demanded by the census schedules. Further, it may be stated that the census of Canada is taken by the de juries volume received in the content of the co

her usual place of abode. Under this system the parents or guardians of the blind or deafmutes who were attending some institution furnished the enumerator with personal data regarding such persons, while at the same time the registrars of such institutions who were also appointed as Census enumerators included on the census records the information for the defectives in theirseveral institutions together with their home address. The names furnished by the institution enumerators were carefully checked in the Bureau with the names supplied by the field enumerators and amendment was made as found necessary.

For Canada as a whole the blind averaged 7 in every 10,000 of the population in 1801, as compared with 6 in 1901, 44 in 1911 and 5 in 1921. The deaf-mutes, who numbered 10 per 10,000 population in 1801, advanced to 11 - 5 per 10,000 in 1901 but dropped back to about 6.4 in 1911 and to 6.1 in 1921. The very large increase in the proportion of blind in Nova Scotia was to some extent due to the explosion on the SS. Mount Blanc, Deember 6, 1917, when 1,630 persons were killed and 41 persons permanently blinded. The Great War also provided a considerable portion of the increases shown for the blind in 1921 over 1911 in all provinces.

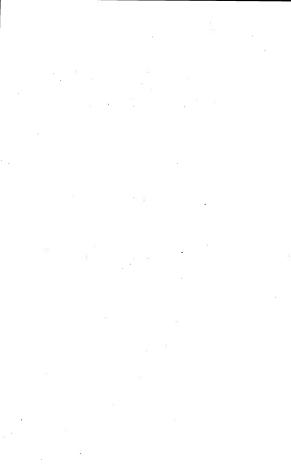

SIXIÈME RECENSEMENT DU CANADA, 1921

VOLUME II-POPULATION

AGE, ÉTAT MATRIMONIAL, LIEU DE NAISSANCE, IMMIGRATION, CITOYENNETÉ, LANGAGE, INSTRUCTION, FRÉQUENTATION SCOLAIRE, CÉCITÉ ET SURDI-MUTITÉ.

OTTAWA F. A. ACLAND IMPRIMEUR DE SA TRÈS EXCELLENTE MAJESTÉ LE RO

RAPPORT SUR LE SIXIÈME RECENSEMENT DU CANADA, 1921.

A Son Ezcellence le Général, le Très Honorable Lord Byng de Vimy, G.C.B., G.C.M.G., M.V.O., Gouverneur-Général et Commandant en chef de la Puissance du Canada.

Qu'il plaise à Votre Excellence:

J'ai l'honneur de soumettre à Votre Excellence le second volume du rapport sur le sixième recensement du Canada, effectué à la date du premier juin 1921.

J'ai l'honneur d'être

de Votre Excellence, le très obéissant serviteur,

THOS. A. LOW, Ministre du Commerce

Ministère du Commerce, Ottawa, 27 février 1924.

ERRATUM

Au volume I du recensement, les internés à l'institution pour les faibles d'esprit, au nombre de 1,143 ont été attribués à la ville d'Orillia, tandis qu'ils appartiennent au canton de ce nom. Cette rectification réduit la population de la ville d'Orillia de 8,774 à 7,631 âmes, comme on le verra dans ce volume.

SIXIÈME RECENSEMENT DU CANADA-IIe VOLUME

BUREAU FÉDÉRAL DE LA STATISTIQUE, CANADA

R. H. COATS, B.A., F.S.S., F.R.S.C., Statisticien du Canada

E. S. MACPHAIL. Chef Statisticien, Section de la Démographie

INTRODUCTION

Aufurch'amesure du dépouillement du sixème recensement du Canada, vingt et un rapports turnet successivement publiés, centenant différentes données sur la population du Canada, dénombrée au premier juin 1921, telles que l'âge, le sexe, l'état matrimonial, le degré d'instruction, etc.

L'introduction au premier volume définit le but et l'objet d'un recensement en général et circonserit le cadre et la portée du sixième recensement du Canada. On y trouve sussi un résumé rétrospectif des opérations du recensement depuis les temps les plus floignés et des détails plus complets sur les recensements autréelois effectuée dans la Puissance, tout particulièrement au regard du mouvement de la population et de sa répercussion sur la représentation parlementaire. Les données concernant la population sont présentées dans le premier volume en deux groupes distincts, savoir: (a) le grossissement et la répartition géographique de la population, par provinces, à chacun des recensements effectuées entre 1871 et 1921, et (b) sa répartition par sexe, origine raciale et religion; on y traite aussi du développement respectif des aggloméntions urbaines et des régions rundes.

Le second volume de cette série embrasse les statistiques relatives à la composition de la population et se caractéristiques. C'est un dévoloppement et une mise au point des statistiques figurant déjà dans les bulletins traitant de la classification de la population selon l'âge, l'état matrimonial, le lieu de naissance, l'année d'immigration, la civopemeté des étrangers, la langue parfice, la langue parfice d'instruction, l'analphabétisme, la frequentation scolaire, la cécité et la surdi-mutité. Chacun de ces sujets fait l'objet d'un chapitre séparé et chaque chapitre est précédé d'une table des matières indiquant les questions traitées.

Les commentaires s'appliquant à chacune des sections de cet ouvrage sont groupés au commencement du volume; ils sont strictement limités aux explications indispensables au lecteur, pour la compréhension des tableaux. C'est à peine si l'on s'est occupé d'analyser ou d'interpréter les chilfres; cette interprétation fera l'objet d'une série de monographics sur les révétations les plus importantes découlant du recessement.

RÉPARTITION DES ÂGES

La statistique des Ages est l'une des divisions à la fois des plus nécessaires en même temps que des plus difficilies de la compilation défungraphique. Il est difficile de pousser bien lois l'exploration d'un domaine économique sans se heurter, à un point ou à un autre, à la répartition de la population par áge, par seve et par condition sociale. Bien que les tableaux de ce chapitre se limitent à la classification de la population par chaque sannée d'âge ou par groupes d'âge, tant pour le sexe feminin, ils rien on taps amois une importance vitade dans presque chacune-des phases de l'étude de la population. Par exemple, on ne peut asprécier avec une partaite exactitude le taux de la mortalité, qu'à la lumière de l'âges et du sexe de la population; des détails relatifs à l'âge, ou sexe et à l'état matrimonial. Les statistiques de la fréquentation scolaire et de l'analphabétisme n'ont de valeur qu'en autant que l'âge est pris en considération. La distribution par âges de la population autochtone ou immêgree est aussi un factour important quand il s'agit de déterminer les effets économiques, sociaux et politiques de l'immigration qu'en les de l'immigration de l'imm

-Erçeurs dans les constatations d'âges.—Il est impossible de prétendre à l'exactitude possible de la statistique de l'âge découlant du recensement, parce que (1) un grand nombre de porsonnes ne connaissent pas exactement leur âge; (2) assez fréquemment, l'énumérateur s'est

procuré ses informations auprès d'une tierce personne, soit un membre de la famille trouvé au logis, soit le propriétaire d'un hôtel ou d'une pension, qui n'ont pu indiquer les âges qu'approximativement et (3) certaines personnes cachent délibérément leur âge.

Lorsque l'âge n'est pas exactement connu, il existe une tendance à l'arrondir par lustres et décades. Par exemple, le nombre de personnes auxquelles est attribie l'âge de 30, 40, 50 ou 60 ans est beaucoup plus considérable que celui des personnes dont l'âge précède ou suit immédiatement la diaine. Le nombre des personnes dont l'âge suit immédiatement la rânnée décennale ou quinquennale, comparé aux âges qui les précèdent immédiatement, semble indiquer que cette habitude de donner son âge en chiffres ronds n'est pas due natant au désir de tromper qu'à la négligence, l'analphabétisme ou l'ignorance de l'âge exact; il est probable que cette inexactitude est buis fréquente chez les adultes que pour les enfants et les adolescents.

Variations de l'âge.—Durant la période écoulée entre les deux derniers recensements, 1011-1021, l'échelle des âges à été érieusement affectés par tries incteurs principaux, résultant plus ou moins directement de la guerre et de ses suites, c'est-d-ire (a) les fluctuations de la natalité, (b) l'arrêt de l'immigration pendant la guerre et (c) els pertes occasionées par la guerre. Le tableau suivant fait ressortir les variations, tant en nombres absolus qu'en pourcentages, des individus de l'un et l'autre secc constituant les groupes d'âges quinquenaux de 20 à 24 ans, de 25 à 29 et de 30 à 34 ans entre 1881 et 1921. Dans les groupes masculinis 20-24 et 25-29 on constate entre 1911 et 1921 une décroissance du nombre absolu de 34,871 et 22,349 individus respectivement. Le pourcentage des hommes de ces âges relativement à la population totale a également sub uim côrte baises, attribuable dans une large meure, d'abord à la guerre, puis à l'épidémie de grippe de 1918. La proportion des femmes de ces groupes est aussi plus faible en 1921 qu'en 1911, excepté dans le groupe de 30 à 34 ans.

HOMMES DE 20 À 34 ANS

| Année du resensement | Population com | | Non | nbre d'homm | 68 | Poure | | |
|-------------------------|---|---|---|---|---|---------------------------------------|--------------------------------------|--------------------------------------|
| regensement | Total | Hommes | 20-24 | 25-29 | 30-34 | 2024 | 2529 | 30-34 |
| 1881 | 4,266,041 4,770,123 5,322,238 7,169,960 8,767,206 | 2,159,858 2,428,936 2,721,942 3,795,308 4,518,344 | 211,634 237,144 256,981 385,855 350,984 | 165,339 194,531 216,334 370,494 347,645 | 131,051 163,866 188,125 310,339 343,263 | 9-80 9-76 9-44 10-17 7-77 | 7-65 8-01 7-95 9-76 7-69 | 6-07 6-75 6-91 8-18 7-60 |

FEMMES DE 20 À 34 ANS

| Année du | Population on n | | Nom | bre de femme | 28 | Pourcent, de la population féminine | | | |
|--------------------------------------|---|-------------------------------------|---------|---|--|--|--------------------------------------|--------------------------------------|--|
| recensement | Total | Femmes | 20-24 | 25-29 | 30-34 | 2024 | 2529 | 30-34 | |
| 1881 1891 1901 1911 1921 | 4,266,041 4,770,123 5,322,238 7,169,960 8,767,206 | 2,341,187 2,600,296 3,374,652 | 235.913 | 166,236 193,115 207,051 287,684 338,874 | 129, 538 155, 724 174, 942 244, 777 309, 623 | 10·34 10·08 9·89 9·50 8·48 | 7-89 8-25 7-96 8-52 7-98 | 6·15 6·65 6·73 7·25 7·29 | |

Personnes d'âge inconnu.—Le recensement est muet sur l'âge d'un petit nombre de personnes, probablement presque toutes adultes. Le nombre de ces personnes est en lui-même une indication du depré d'exactitude de toutes les données du recensement. Le tableau qui suit indique le nombre des individus dénombrés à chaque recensement depuis 1881, dont l'âge est resté inconnu.

| Année du recensement | Population | Persons | nes d'âge inco | nnu | Nombre de personnes d'âge inconnu par 100,000 âmes | | | |
|----------------------|---|----------------------------|--|--|--|---------------------------------|---------------------------------|--|
| | | Des deux sexes | Du sexe masculin | Du sexe féminin | Des deux sexes | Du sexe masculin | Du sexe féminin | |
| 881 | 4,324,810 4,833,239 5,371,315 7,206,643 8,788,483 | 63,116 49,077 36,683 | 28,996 31,535 29,766 26,687 11,601 | 29,773 31,581 19,311 9,996 9,676 | 1,358 1,305 913 509 242 | 670 652 554 370 132 | 688 653 359 139 110 | |

On voit par ce tableau qu'en 1921, 242 personnes seulement par 100,000 âmes se trouvaient dans ce cas, tandis que cette proportion était de 509 en 1911, 913 en 1901, 1,305 en 1891 et 1,358 en 1881. Si la proportion de 1881 s'était maintenue en 1921, le dernier recensement aurait ignoré l'âge de 119,425 personnes, tandis que celles-ci ne dépassent pas 21,277.

Comparaison avec d'autres pays.—Dans le tableau qui suit, on établit une comparaison de la répartition des agges entre le Canada et différents autres pays d'après les derniers recensements de ceux-ci. L'étalon de comparaison généralement adopté dans la répartition des agges est la population de la Suède qui est relativement stationnaire et très peu affectée par l'immigration.

PROPORTIONS EN DIFFÉRENTS PAYS, DE FERSONNES DE CHAQUE GROUPE D'ÂGE DE CINQ ANS, PAR 10,000 PERSONNES VIVANTES DE TOUT ÂGE

| Groupes d'âge (années) | Canada (1921) | Nouvelle- Zélande (1921) | Victoria (Austra- lie) (1921) | Afrique - Sud (Blance) (1921) | Angleterre et pays de Galles (1911) | Suède (1910- 1911) | Dane- mark (1910- 1911) | Etats- Unis (blancs) (1910) | Japon (1918- 1919) |
|--|---|---|--|---|---|---|---|--------------------------------------|---|
| D- 4 - 5 - 9 - 9 | 1, 206 1, 198 1, 198 1, 042 915 811 783 745 721 601 496 413 320 273 198 134 81 43 | 1,083 997 882 798 765 783 800 723 574 460 327 260 201 | 1,018 1,028 936 854 848 867 803 684 607 536 527 463 351 126 80 45 20 20 35 36 36 36 46 36 36 36 36 36 36 36 36 36 36 36 36 36 | 1, 284 1, 213 998 790 804 709 653 602 519 404 287 215 147 90 51 | 854 798 725 619 534 444 354 283 224 | 1, 122 1, 053 996 928 828 731 667 581 502 517 475 404 3511 305 234 170 91 | 1, 213 1, 101 1, 049 823 759 698 604 537 473 455 380 319 257 192 123 60 | 314 254 190 126 76 | 1, 290 1, 199 1, 025 833 711 660 633 584 433 321 244 189 33 |
| 75-99 | _1 | _1 | _1 | - | 1 : | _1 | _1 | _1 | |
| Total | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 |

On remarquera que les chiffres du tableau précédent ne contiennent les données de 1921, que pour la Nouvelle-Zélande, l'Afrique-Sud et l'état de Victoria, Australie; quant au Japon, ses chiffres étant fort repprochés de 1921, ils constituent une base de comparaison appréciable. La population canadienne de moins de 55 ans se répartit d'une manière qui se peut favorablement comparer avec celle de la Subde, mais au delà de cet âge la comparaison est moins favorable.

Centenaires.—Le tableau suivant donne le nombre des personnes agées de 100 ans et plus lors des recensements de 1911 et 1921; aux recensements de 1891 et 1901 les centenaires étaient placés dans le groupe de 95 ans et plus.

POPULATION DE 100 ANS ET PLUS, 1921 ET 1911

| | | 1921 | | 1911 | | | |
|---|---------|--------|---------|----------|---------|--------|--|
| Provinces | Total | Hommes | Femmes | Total | Hommes | Femmes | |
| Canada | 183 | 90 | 93 | 120 | 62 | | |
| Anada Ile du Prince-Edouard Nouvelle-Ecosse | 4 37 | 13 | 4 24 | 17 | 1 7 | 1 | |
| Nouveau-Brunswick | 8 29 | 11 | 18 | 14 21 | 8 | 1 | |
| Ontario | 57 | 38 | 19 | 37 6 | 24 1 | 1 ' | |
| Saskatchewan Alberta | 21 7 | 11 2 | 10 5 | 8 | 1 3 | | |
| | 6 | _2 | 1 | 11 | _9 | ١. | |
| Yukon Territoires du Nord-Ouest. | - | - | - | 1 | - | | |

L'exactitude de ces chiffres est corroborée asses exactement par les statistiques de la mortalité de 1921, Petatant le décèse de 37 hommes et 35 femmes de 100 ans et plus au cours de l'année solaire. En 1922, 40 hommes et 23 femmes du groupe des centenaires sont passés de vie à trôpas.

ÉTAT MATRIMONIAL

Définition des termes.—Les expressions "marié", "veul", "veuve" ou "divorcé", indiquent l'état matrimonial au moment même du recensement, c'est-à-dire qu'une personne autrefois veuve ou divorcée, mais qui s'est remariée, figurera dans la catégorie des mariés. Les époux légalement séparés de corps et de biens figurent avec les divorcés.

Possibilité d'erreur.-En dépouillant les cinquième et sixième recensements, toutes les fois que l'état matrimonial d'un adulte n'était pas décrit, on a porté cette personne dans la colonne intitulée "Inconnu". Au contraire, au cours de la compilation des quatre premiers recensements on avait laissé de côté entièrement tous les adultes dont on ignorait l'état matrimonial. Le dernier recensement est resté muet sur l'état matrimonial de 17.098 adultes, soit 9.418 hommes et 7,680 femmes, c'est-à-dire un peu moins de deux individus par 1,000 âmcs. De ce nombre 6,697 personnes, soit 3,401 du sexe masculin et 3,296 du sexe féminin habitent certaines localités isolées dans l'Ungava, le Yukon et les Territoires du Nord-Ouest, où les opérations du recensement se sont limitées à un dénombrement pur et simple. Il ne reste donc dans les régions organisées de la Puissance que 10,401 personnes, soit 6,017 hommes et 4,384 femmes dont on ne connait pas l'état matrimonial; d'autre part, les documents originaux nous montrent que, à l'exception de 610 hommes et 221 femmes d'état matrimonial inconnu, les autres manquements s'appliquent aux gens dont la maison était fermée lors du recensement (3); dans ce dernier cas l'énumérateur put obtenir dans le voisinage des informations succinctes, c'est-à-dire le nombre, le sexe, etc., des personnes momentanément absentes de leur domicile, mais le prolongement de cette absence ne permit pas de se procurer de plus amples détails à leur sujet. Il existe d'ailleurs d'autres sources d'erreur qui doivent entrer en ligne de compte, telles que (1) les déclarations inexactes faites sciemment; (2) les hommes ayant abandonné leur famille peuvent facilement se dire célibataires ou veufs; (3) les filles-mères peuvent se dire mariées; (4) enfin, les divorcés peuvent dans certains cas avoir figuré soit comme célibataires, soit comme mariés ou veufs.

Âge et sexe.—Toute analyse de l'état matrimonial, à un moment donné, doit nécessaire ment être accompagnée d'une classification de cette population par âge et par sexe. C'est pourquoi les différents tableaux du chapitre consacré à l'état matrimonial présentent ces indications d'âge et de sexe.

On n'a trouvé que 40 personnes âgées de moins de 15 ans qui fussent engagées dans les liens du mariage; toutes appartenaient au sexe fémini; 32 d'entre elles étaient nées au Canada et 8 à l'étranger. Dans la population du Canada et dans celle de chacune des provinces, hornis Quebee, les individus du sexe masculin prédominent. La même prédominance est également apparente parmi la population mariée. Par contre, le nombre des veufs et des divorcés est considérablement inférieur à celui des veuves et des divorcés. Cette disparité, d'alleurs constatée à chaque recensement, fut considérablement accentuée en 1921 par les veuves de guerre. (Tableau 26).

La proportion des non mariés des deux sexes, par rapport à la population totale de chaque sexe est tombée de 33-5 p. c. pour le sexe massulin et 59-71 p., pour le sexe féminien 1901, à 62-0 p.c. et 57-37 p.c. respectivement en 1911 et à 59-88 p.c. et 55-86 p.c. respectivement en 1921. D'où il suit que la proportion des gene mariés de l'un et l'autre sexe était plus grande en 1921 qu'en 1911 et supérieure en 1911 à celle de 1901. En 1901, les veurs constituaient 2-68 p.c. du total de la population massuline, en 1911, 2-38 p.c. et en 1921, 2-64 p.c., tandis que les veuves représentaient 5-77 p.c. de la population féminine en 1901, 5-31 p.c. en 1911 et 5-55 p.c. en 1921.

Centres ruraux et urbains.—En égard aux diffrences notables existant dans la composition des populations rurale et urbaine, et leur état matrimonia, on a établi des statistiques séparées pour ces deux catégories de population dans les tableaux 27 et 28. ¹Au point de vue du recensement, la population des cités, des villes et des villages incorporés, quelle que soit leur importance, est considérée comme urbaine, tout le surplus de la population constituant la population rurale. Toutefois, dens la Colombie Britannique il existe certaines localités qui, quoique urbaines par leur nature, ne sont pas administrativement constituées en agglomérations urbaines

⁽¹⁾ Lorsque, au moment du recensement, une maison était trouvée fermée par suite de l'absence temperaire de ses occupants, l'énumérateur constatait ce fait sur une fiche dite "Carte de maison fermée".

et ont dû par conséquent être considérées comme rurales. D'autre part, dans le centre-ouest on trouve des cités de moins de 3,000 âmes, des villes de moins de 300 âmes et des villages ne possédant nes 50 habitants.

Divorcés.—Depuis l'année 1881, il a été prononcé au Canada 2,365 divorces, déliant du lien conjugal 4,730 personnes. Le recensement de 1921 a dénombré 7,401 divorcés et séparés de corps des deux sexes, soit 3,670 hommes et 3,731 femmes; en 1911 les divorcés et séparés de corps n'étaient qu'au nombre de 4,400, soit 2,125 hommes et 2,275 femmes.

LIEU DE NAISSANCE

Sous cette rubrique on a procédé à la classification de la population dénombrée par le sixième resonent selon: (1) la province natale de la population née au Canada et (2) le pays de naissance de la population immigrée.

Cette classification est opérée sous quatre en-têtes principaux: (1) chiffres compantifs pour tout le Canada et pour les provinces à dater des premières informations en existence, (tableaux 34-38); (2) classification de la population autochtone selon la province natale, le lieu de naissance des parents, la migration, etc., (tableaux 39-49); (3) pays d'origine de la population immigrée, la province qu'elle habite au Canada et sa répartition entre les centres urbains ou ruraux, (tableaux 50-51); (4) classification selon le lieu de sa naissance, de la population des cités et villes de 7500 ûmes et huge et des subdivisions de comtée, (tableaux 25-6).

Données comparatives.—Sur les 1,581,840 individus constituant l'augmentation, entre 1911 et 1921, de la population canadienne, 1,213,65 ou 76 · 70 · p.c. sont née au Canada, 229,857 ou 13 · 9 p.c. sont originaires des lles britanniques, 10,383 ou 0 · 7 p.c. proviennent des autres possession britanniques ou bien sont née en mer, si bien qu'il ne reste plus que 137,550 individus soit moins de 9 p.c. de l'accroissement survenu entre 1911 et 1921, qui soient attribuables à des sources étrangères. Parmi ceux-ci, on compte 70,344 immigrants venant des Etats-Unis, soit plus de 50 p.c. du contingent étranger entré au Canada, de 1911 à 1921. Le recensement de 1911 avait constaté un accroissement étécenal de population de 1,283,528 fanes, dont 947,867 ou 52 p.c. autochtones, 413,178 ou 22 · 5 p.c. nés dans les autres parties de l'empire britannique et 474,283 ou 25 · 5 p.c. nés l'étranger.

En envisageant les 40 dernières années, nous voyons qu'à chacun des recensements de cette période, la répartition proportionnelle de la population, selon le lieu de sa naissance, s'opérait de la manière auivante: en 1881, sur une population totale de 4,324,810 âmes, les autochtones constituaient 80-00 p.c.; les immigrés de naissance britannique 11-07 p.c. et les immigrés des l'étranger 2-87 p.c. En 1891, sur une population de 4,833,239 âmes les trois catégories ci-dessus représentaient respectivement 80-68 p.c., 10-15 p.c. et 3-17 p.c. En 1901, sur une population de 5,371,315 âmes, les mémes catégories se tradusisent par les pourcentages suivants; 80-88, 7-88 et 5-18. En 1911, sur une population de 7,205,643 âmes cette relativité es tradusait par 77-98 p.c., 11-58 p.c. et 10-44 p.c. Enfin, en 1921, sur une population totale de 8,788,483 âmes les Canadiens d'origine constituaient 77-75 p.c.; cux nés dans les autres parties de l'empire britannique 12-12 p.c. et ceux nés à l'étranger 10-13 p.c.

¹ En 1911, les autochtones formaient moins de la moitié de la population dénombrée dans-PAlberta, la Colombie Britannique et le Yukon, mais en 1921, la population néa nu pays représente dans chaque province plus de la moitié de sa population totale. Les immigrés nés dans les pays étrangers, qui en 1911 formaient 33-02 p.c. de la population totale de la Saskatchewan, 38-13 p.c. de colle de l'Alberta et 26-78 p.c. de celle de la Colombie Britannique tombaient en 1921 à 26-31 p.c. dans la Saskatchewan, 29-56 p.c. dans. l'Alberta et 19-02 dans la Colombie Britannique. (Tableau 35).

Accroissement naturel.—L'accroissement naturel de la population née au Canada durant la décade 1911-1921 fut de 1,213,065 fanes ou 21-89 pc.; durant la décade précédente, et accroissement avait porté sur 947,867 âmes, soit 20-29 p.c. A l'exclusion de l'Île du Prince-Edouard, toutes les autres provinces possédaient en 1921 un plus grand nombre d'habitants nes dans la province et vivant au Canada qu'en 1911. Entre 1911 et 1921 la Nouvelle-Eosses ajouta à la population du Canada, par le moyen des naissances seulement, 30,614 âmes, le Nouveau-Brunswick 33,649, Ouyébes 236/176 et Ontairo 273,237.

Migration interprovinciale des autochtones.—Quoique les tableaux donnent mensuration statistique du mouvement interprovincial de la population née au Canada, ils n'indiquent d'aucune manière la migration à l'intérieur d'une province, non plus que l'aimantation des populations rurales par les groupements urbains. Cette migration intraprovinciale nécessite parfois de plus grands voyages et détermine un changement de milieu plus accentué que si la frontière d'une province avait été traversée; malheureusement, le recensement n'offre aucun moven de l'apprécier. D'autre part, les données du recensement ne relatent la migration d'une province à une autre que lorsqu'il s'agit de la province de naissance. Par exemple, on ne trouve dans le recensement que la province de naissance et la province de résidence au moment du dénombrement, mais il n'est tenu nul compte des séjours plus ou moins longs qui ont pu être faits dans d'autres provinces, dans l'intervalle. Il est évident que le nombre des gens nés dans une certainc province et domiciliés dans une autre province ne représente nullement le chiffre des personnes ayant quitté leur province natale pour aller en habiter une autre pendant un temps donné. Le recensement étant essentiellement un dénombrement de la population à une date fixe ne permet que de mesurer les effets directs du mouvement interprovincial de la population et sa mobilité de décade en décade. (Tableaux 39, 40 et 41).

Le tableau qui suit permet d'apprécier la migration vers les provinces des prairies et la Colombie Britannique de la population née dans les provinces de l'est. Sur les 568,065 individus nés dans les provinces de l'est et s'en étant éloignés, le recensement de 1921 nous apprend que 68-88 p.c. d'entre eux résidaient alors dans les provinces de l'ouest, tandis qu'au recensement précédent, sur une migration totale de 481,363 individus partie des provinces de l'est, 73-20 p.c. vivaient dans l'ouest. Le mouvement interprovincial partant des provinces maritimes s'est surtout dirigé vern l'extréme-cest, c'est-dire l'Alberta et la Colombie Britannique, tantie que les gens de Québec et d'Ontario ont manifesté leur préférence pour le centre-ouest, c'est-d-dire le Manitoba et la Saskatchewske

MOUVEMENT MIGRATOIRE DE LA POPULATION NÉE DANS LES PROVINCES DE L'EST EN 1921 ET 1911

| | | Po | pulation | | | Distribution des migrateurs | | | | |

| Total1921 | 5,758,863 5,097,084 | 568,965 481,935 | 9.88 | 391,888 352,790 | 68 · 88 73 · 20 | 85,099 89,366 | 133,615 116,006 | 97,811 77,367 | 75,968 | |

Proportion de la population sédentaire.—La proportion de la population née dans la province où elle réside est plus minine dans les provinces de l'ouest e 1921, qu'en 1911, mais dans les provinces de l'ouest c'est tout le contraire. Par exemple, au Manitobs en 1921, sur la population née au Canada, il se trouvair 57-17 p. de gené ayant vu le jour au Manitobs en 1921, de 68-14 p.c. en 1911; dans la Saskatchewan, la population d'origine locale était en 1921 de 68-83 p. de la population née au Canada, au lieu de 40-95 p.c. en 1911; dans l'Alberta, cette preportion s'élevait en 1921 à 61-74 p.c., au lieu de 45-37 p.c. en 1911; dans la Colombie Britannique le pourcentage s'élevai de 49-9 en 1911 à 95-5 en 1921. On trouvera dans le tablesu 39 la répartition proportionnelle de la population née au Canada résidant dans chacune des provinces, classifies éscelon la province de naissance.

Le tableau 40 est consacré à la répartition proportionnelle de la population née dans chaque province, par province de résidence. On y voit, par exemple, que sur la population née dans l'Ille du Prince-Edouard et vivant au Canada, 82:93 p.c. habitent aujourd'hui la province où ils sont nés, 3:82 p.c. résident en Nouvelle-Ecosse, 2:89 p.c. au Nouveu-Brunswick 2:01 p.c. dans Ontario. autant duns Québec et 8:31 p.c. dans les provinces sises à l'ouest des grands lacs.

Lieu de naissance des parents des autochtones.-Parmi la population née au Canada, 71.09 p.c. étaient issus de père et mère eux-mêmes nés au Canada, 10.18 p.c. avaient pour père et mère des gens nés dans d'autres parties de l'empire britannique et 7.06 p.c. descendaient de père et mère nés l'un et l'autre à l'étranger. Dans l'est du Canada la proportion de la population dont les parents n'étaient pas Canadiens est relativement minime, mais dans les provinces de l'ouest elle dépasse sensiblement la moitié. Au Manitoba, on ne trouve que 41.74 p.c. de la population née au Canada dont le père et la mère v étaient eux-mêmes nés; dans la Saskatchewan... cette proportion est de 41.65 p.c., dans l'Alberta, de 39.43 p.c. et dans la Colombie Britannique 39.21 p.c. Il est important de noter que les natifs du Canada dont le père et la mère y étaient eux-mêmes nés sont moins nombreux dans le groupe au-dessous de 10 ans que dans les groupes de 10 à 20 ans et de 21 ans et plus; au contraire, les gens dont le père et la mère sont nés à l'étranger sont les plus nombreux dans le groupe au-dessous de 10 ans et présentent la plus faible porportion dans le groupe de 21 ans et plus. Les personnes dont le père et la mère sont nés à l'étranger représentaient au Manitoba 34-08 p.c. de la population née au Canada et âgée de moins de 10 ans, 42.48 p.c. dans la Saskatchewan et 41.26 p.c. dans l'Alberta. Quant aux autochtones de 21 ans et plus dont le père et la mère sont nés à l'étranger, ils ne constituaient que 8.5 p.c. au Manitoba, 6.4 p.c. dans la Saskatchewan, 4.5 p.c. dans l'Alberta et 2.9 p.c. dans la Colombie Britannique.

La population autochtone est également classifiée de manière à distinguer œux dont le père et la mère vaineiunt nés dans le mème pays de ceux dont le père et la mère vanient de pays différents, cette distinction étant établie sur l'origine raciale et l'âge. Le premier groupe est placé sous trois rubriques distinctes: (a) père e t mère canadiens; (b) père et mère d'origine étrangère, ce dernier groupe étant subdivisé de manière à embrasser le cas de père et mère nés dans de spays différents. Cette statistique est intéressante en ce qu'elle révèle la composition de la population quant aux races avec, comme arrière-plan, l'origine des parents. Par exemple, parmi la population de au Canada dont l'origine raciale est anglaise, près de 60 p.c. étaient issus de père et mère nés au Canada, environ 20 p.c. descendaient de père et mère nés dans les autres parties de l'empire pirtannique et noviron 11 p.c. devaient le jour à deux personnes de naissance étrangère, laissant un peu moins de 19 p.c. pour ceux d'origines métangées. (Elbaleux 43-49)

Population immigrée.—La population immigrée habitant au Canada au premier juin 1921 est classifiée au regard du lieu de sa naissance sous deux divisions principales, savoir: (a) celle d'origine britannique et (b) celle d'origine étrangère.

Il est utile de dire immédiatement que cette classification selon le lieu de naissance ne donne la physionomie ceracte ni de l'importance de l'immigration canadienne ni de ses sources. Par exemple, maintes personnes nées soit dans les fles britanniques, soit dans l'Europe continentale, pervent être entrées au Canada comme immigrants des Etats-Unis et cependant le recensement ne tenant compte que du lieu de leur naissance les considérers comme immigrants venant du pays d'où ils venaient réclement en dernier lieu. De même, les indications relatives aux Canadiens rapatriés sont excessivement rares.

La population immigrée d'origine britannique est subdivisée en deux rubriques: (1) celle née dans les fles britanniques; (2) et celle née dans les possessions britanniques. Quant à la population immigrée d'origine étrangère, elle est divisée en quatre groupes: (1) née en Europe; (2) née en Asse; (3) née aux Estats-Unis; (4) née dans les autres pays. (Tableaux 50 et 51).

D'origine britannique.—Entre 1011 et 1921 l'accroissement net de la population née dans les britanniques fut de 27-47 p.c., comparativement à un accroissement de 69-65 p.c. au cours de la décade présente. La modicité de cet accroissement au cours de la décade présente. La modicité de cet accroissement au cours de la déemité nécade est sans aucun doute attribuable à la guerre qui, non seulement empécha l'immigration, mais ramorela sous les draneaux maintes personnes nées dans les lites britanniques et un d'étaient

xxxviii

fixées au Canada entre 1911 et 1914. On trouvera dans l'état qui suit le nombre des personnes nées dans les îles britanniques et habitant le Canada, par décades, depuis 1871, ainsi que la proportion qu'elles forment de la population totale à chaque périods.

POPULATION NÉE DANS LES ÎLES BRITANNIQUES ET RÉSIDANT AU CANADA. 1871-1921

| | | | Née dans les île | s britanniques | | Pourcentage de la popu- |
|-------------------------|--|--|--|--|------------------------------|---|
| Recensement de | Population totale | Totale (*) | Angleterre et Galles | Irlando | Ecosse | lation totale née dans les fles britan- niques |
| | nombre | nombre | nombre | nombre | nombre | p.c. |
| 1871(1) 1881 1891 | 3,579,782 4,324,810 4,833,239 5,371,315 7,206,643 8,788,483 | 495,321 470,092 476,466 404,848 804,234 1,025,121 | 146,956 169,504 219,688 203,803 519,401 700,442 | 223, 163 185,526 149, 184 101, 629 92,874 93, 301 | 115,062 107,594 83,631 | 13-84 10-87 9-88 7-54 11-16 11-66 |

Ontario, Québec et provinces maritimes seulement.
 Comprend autres lies et pays non indiqué.

Ainsi que l'on doit s'y attendre, la proportion des immigrés nés dans les possessions ou colonies britanniques est presque insignifiante; Terre-Neuve est la source principale de cette immigration, 58 p.c. de tous les immigrés crédités aux possessions britanniques en 1921 venant de cette fle.

Sur la totalité des immigrés dénombrés dans toute la Puissance au dernier recensement, 32-81 p.c. se tourvaient dans Ontario, 40-67 p.c. dans les provinces des prairies, 13-32 p.c. dans la Colombie Britannioue. 9-64 p.c. dans Québec et moins de 34 p.c. dans les provinces maritimes.

Quant aux immigrés de naissance britannique, Ontario en possédait plus de 43 p.e., les provinces des prairies environ 29 p.e., la Colombie Britannique 15 p.e., Québec 8 4 p.e. el les provinces maritimes moins de 4 p.e. En ce qui concerne les immigrés d'origine étrangère 54 p.e. d'entre eux étaient fixés dans les pirovinces des prairies au derieir recensement, 20-5 p.e. ac trouvaient dans Ontario, un peu plus de 11 p.e. vivaient dans le Colombie Britannique et à peu près autant dans Québec: enfin 3 p.e. a vaient cherché un foyer dans les provinces maritimes.

D'origine étrangère.—Le classification de la population née à l'étranger, selon le lieu de naissance, és ets opérée sur la base des remaniements territoriaux d'après-guerre, les statistiques de 1901 et 1911 ayant été modifiées, de manière à correspondre à ces changements. Nous indi-quos ci-desous les modifications territoriales survenues entre 1910 et 1920 qui entrèrent ne ligne de compte dans la construction des tableaux, de manière à permettre une comparaison entre les années 1901, 1911 et 1921 du lieu de naissance de la population canadieme d'origine étrangère. Les pays dont les territoires ont été soit agrandis, soit diminués ont été placés par groupes géogra-bitunes ainsi qu'ill suit :—

NORD-OURST DE L'EUROPE

Belgique.-Annexion des villes d'Eupen et de Malmédy, détacbées de l'Allemagne,

Danemark.—Annexion du Schleswig du nord, rendu par l'Allemagne.

France.—Annexion de l'Alsace-Lorraine, détachée de l'Allemagne.

EUROPE CENTRALE ET ORIENTALS

- Autriche.—Annezion de territoire bongrois. Détachement de territoire à la Tchécoslovaquie (q.v.), à la Pologne (Galbiel), à la Yougo-Slavie (q.v.), à la Roumanie (Bukovinc), et à l'Italia (le Trentin, Goritz, la péninsule istricane ot Triesto); et détachement de l'ume (état libre; voir "Autre Europe").
- Buigarte.—Détachement de territoire à la Grèce (Thrace buigare) et à la Yougo-Slavie (le territoire détaché comprend les villes de Strumitas et de Tambred). Il de la Créce (Thrace buigare) et à la Yougo-Slavie (le territoire détaché comprend Thécesloraquie.—Créée à même le territoire autrefoie comprie dans l'Autriche-Hongrie (Bohéme, Moravie, Ruthénie et Slovaouie).
- ot Slovaquio).

 Allemagne.—Détachement de territoire à la France (Alsace-Lorraine; à la Belgique (Eupen et Malmédy; à la Pologno
 (Prusso cocidentale et Posen); au Demmark (Schlewig da nord); le basain de la Sarre (mainteanst gouverné par une commission de la Lique des Nations voir "Autre Europe,"); et Danzin (Cité libre, voir "Autre Europe,") "Autre Europe,")

 Allemagne.—Détachement de l'entre de l'ent
- Hongrie.—Détachement de territoire à l'Autriche et à la Tchéceselovaquie (Ruthénie et Slovaquie); à la Roumanie (comprenant la Transylvanie et une partie de Banat), et à la Yougo-Slavie (q.v.).
- Yongo-Slavia—Crée à nutuse le territoire formant autrefois la Serbie et le Mondanigro et une partie de l'ancienne Autriche-Hongo (Carniole, Dalminie, Creasie, Slavorie, partie de Banat, Bossie et Herrégovine), et à la Bulgarie (lo territoire absorbé comprend les villes de Strumitea et de Tearibrod). Lithuank—Autrefois partie do la Russie.
- Pologne.—Rétablie sur ses ancicanes bases comm e état indépendant par la réunion de la Pologne nutrichienne (Galicie), la Pologne allemande (Prusse occidentale et Posen) et la Pologne russe.

xxxix

-Annexion de territoire autrichien (Bukovine), hongrois (Transylvanie, partie du Banat et autre terriire), et russe (Bessarabie). Bussle.—Détachement de territoire à la Pologne (Pologne russe) et à la Roumanie (Bessarabie) et détachement de

la Lithuanie. —Détachement de territoire à la Grèce (tles turques de la mer Egée, la Thrace turque et Smyrne)

EUROPE MÉRIDIONALE

Albanie.-Autrefois comprise dans la Turquie d'Europe.

Grèce.—Annexion de territoire bulgare (Thrace bulgare) et Turquie d'Europe (Hes turques de la mer Egée et Smyrne). Italie .- Annexion de territoire autrichien (le Trentin, Goritz, la péninsule istrienne et Trieste).

AUTRE EUROPE

Dantzig.-Cité libre, autrefois comprise dans l'Allemagne. Flume.-Etat libre, autrefois territoire autrichien.

Bassin de la Sarre.—Sous le gouvernement d'une commission de la Ligne des Nations; autrefois territoire allemand.

Aaro

Arménie.—Autrefois faisant partie de la Turquie d'Asie. Palestine.—Autrefois faisant partie de la Turquie d'Asie

Syrle.-Autrefois faisant partie de la Turquie d'Asie

Turquie d'Asie.—Détachement de l'Arménie, de la Palestine et de la Syrie et détachement du Hedjaz (maintenant curje dans "Autre Asie"). Autre Asie.—Comprend l'Hediaz, autrefois faisant partie de la Turquie d'Asic.

Dans le recensement, toutes les personnes nées ailleurs que dans l'empire britannique sont classifiées comme nées à l'étranger. Sur les 890,282 individus de naissance étrangère dénombrés au dernier recensement, 459,328 ou 51 · 6 p.c. étaient nés dans les pays de l'Europe continentale; 53,636 ou 6 p.c. en Asie; 374,024 ou près de 42 p.c. étaient nés aux Etats-Unis.

En 1921, parmi la population immigrée au Canada, 45-52 p.c. étaient d'origine étrangère, comparativement à 47.43 p.c. en 1911 et 39.81 p.c. en 1901.

La proportion de la masse de la population constituée par les immigrés d'origine étrangère fut relativement minime à chacun des derniers recensements; elle était de 2.87 p.c. en 1881, 3·17 p.c. en 1891, 5·18 p.c. en 1901, 10·44 p.c. en 1911 et 10·13 p.c. en 1921. Quoique la relation entre la population d'origine étrangère et la population totale fut plus petite en 1921 qu'en 1911, la population d'origine étrangère avait néanmoins augmenté, durant la décade. de 137,550 individus; en 1911, on comptait 752,732 personnes d'origine étrangère, tandis qu'en 1921 il y en avait 890,282.

Les étrangers nés en Europe constituaient 23·49 p.c. de la population immigrée dénombrée en 1921, au lieu de 25 · 52 p.c. en 1911 et 17 · 95 p.c. en 1901. Aux 29,279 immigrés nés en Pologne, il convient d'ajouter les 36,025 nés en Galicie, ce dernier pays, qui exista comme république indépendante depuis octobre 1918 au 16 juillet 1919, formant maintenant partie de la Pologne; par conséquent, nous avons donc 65,304 personnes vivant au Canada dont le lieu de naissance se trouve à l'intérieur des frontières de la république de Pologne, telle qu'elle est maintenant constituéc.

Le dernier recensement a constaté que sur la population d'origine étrangère (890,282) 483,615 personnes ou 54.32 p.c. vivaient dans les campagnes et 406,667 ou 45.68 p.c. dans les agglomérations urbaines. Les immigrés d'origine scandinave et les Galiciens marquent une préférence pour la vie rurale. Par contre, on ne trouve en dehors des cités et des villes qu'une proportion relativement minime des immigrés venant de la Grèce, (10·67 p.c.), de l'Italie (24·19 p.c.) ou de la Pologne, non compris la Galicie, (32.70 p.c.). La grande majorité des Asiatiques demeurant au Canada sont des citadins, à l'unique exception des Japonais, dont 61-84 p.c. habitent en dehors des cités et des villes; le plus grand nombre des Japonais ainsi classifiés se livrent à la culture maraîchère dans la banlieue des villes ou bien à la pêche sur le littoral du Pacifique.

ANNÉE D'IMMIGRATION

La connaissance de l'année d'immigration fournit une base de comparaison au regard de la répartition dans les différentes provinces de la population immigrée, soit qu'elle vienne des pays britanniques, soit qu'elle vienne des pays étrangers. Elle permet aussi de déterminer quelle proportion des immigrants entrés au pays durant une certaine période, d'après les statistiques de l'immigration, étaient encore vivants et continuaient à habiter le Canada au moment du recensement.

Sur une population immigrée de 1,955,736 individus dénombrés au dernier recensement, 1,065,454 soit 54-48 p.c. venaient soit des fles britanniques soit des autres pays britanniques et 890,282, soit 45.52 p.c. des pays étrangers. De tout temps, sauf durant les années 1915-1918, les immigrés venant des pays britanniques ont été plus nombreux que ceux arrivant des pays étrangers. Pendant la guerre, sur 100 immigrants on comptait environ 35 britanniques et 65 étrangers et, parmi ces derniers, 71 p.c. venaient des Etats-Unis.

Les données du recensement de 1921 permettant de classifier la population immigrée, par périodes d'arrivée, les statistiques analogues tirées des recensements précédents, eu égard aux décès ou à une nouvelle migration de ces immigrants, n'ont conservé qu'une infime valeur comparative et, par conséquent, on s'est abstenu de les donner ici. Bornons-nous à signaler qu'en 1901, la population immigrée vivant au Canada représentait 699,500 individus ou 13 p.c. de la population totale de 5,371,315 âmes; en 1911, elle s'élevait à 1,586,961 individus ou 22 p.c. de la population totale de 7,206,643 âmes et, enfin, en 1921, elle était de 1,955,736 individus ou 22.2 p.c. de la population totale de 8,788,483 âmes. Environ 55 p.c. de la population immigrée dénombrée au dernier recensement est entrée au Canada avant 1911.

Les immigrés nés dans les pays étrangers constituaient 5.2 p.c. de la population de la Puissance en 1901, 10 · 4 p.c. en 1911 et 10 · 1 p.c. en 1921. Considérant la population immigrée dénombrée à chaque recensement, on constate que les gens nés à l'étranger formaient près de 40 p.c. de la masse en 1901, environ 48 p.c. en 1911 et environ 45 5 p.c. en 1921. Parmi la population d'origine étrangère dénombrée au dernier recensement, 15.37 p.c. étaient arrivés au pays avant 1900 et 55-36 p.c. avant 1911. Plus de 81 p.c. des immigrants nés à l'étranger dénombrés en 1921 étaient entrés au Canada antérieurement à 1914. (Tableaux 56-59),

CITOYENNETÉ DES IMMIGRÉS NÉS À L'ÉTRANGER

Dès l'année 1901 on s'est enquis, à chaque recensement décennal, de la citoyenneté de la population immigrée née à l'étranger. En 1921, les énumérateurs qui procédèrent au dénombrement de la population avaient reçu à cet égard les instructions suivantes:

"Le qualifeatif "Canadien" era amployé pour désigner toute personse domiellée es es pays et y ayant acquis le droit de citoyenset. Tout individue à sur Etate-Diss, es France, ca Allemages ou dans un atre pays étranger, mais domiellée et naturalisé au Canada sera également quasifié "Canadien". Il en sera de même pour toute personse sée dans le Royanme-Uni ou l'une quédocaque de seu concione et dont le eléquir au Canadie, n'es pas simplement temporaire. La nationalité d'un l'une quédocaque de seu concione et dont le Royanneaubain sera déterminéo par le pays où il est né ou bien le pays dont il est citoyen ou sujet.

Une femme mariée aura sécessairement la même citoyemeté que son mari. Un enfant né à l'étranger n'ayant pas encore 21 ans, a la même citoyementé que ses parents."

Ces instructions expliquent que des immigrés nés à l'étranger, entrés au Canada au cours des cinq années (durée de la résidence au Canada requise pour obtenir la naturalisation) précédant la date du recensement, sont qualifiés comme "citoyens Canadiens", les dites instructions étant basées sur les dispositions de la loi de naturalisation de 1914, lesquelles accordent la qualité de sujet britannique naturalisé aux personnes sujvantes:

(a) "Toute personne née en territoire britannique;
 (b) "Toute personne née dans des territoires britanniques, dont le père était suiet britannique au moment de sa nais-

(b) "Toute persons and class des territoires bitisaniques, dont is pive était sujet britanique au moment de as nais(c) "toute persons able dans des territoires bitisaniques (c) "toute persons able bleut d'un sujet britanique, mêt nois dans des caus territorials étraspérer, to (c) "toute persons able bleut d'un sujet britanique se loit autérimenment, soit postériourement à la présente loi. Person toutefois (1) "que l'enfant d'un sujet britanique se loit autérimenment, soit postériourement à la présente loi. (a) "La forme d'un citopur britanique serves auteriment par le l'entranique."

(c) "La forme d'un citopur britanique serves auteriment par l'entranique serves auteriment de l'entranique serves auteriment des serves de l'entranique serves auteriment de l'entranique serves auteriment de l'entranique serves auteriment de l'entranique serves auteriment des l'entraniques serves auteriment de l'entranique serv

La participation du Canada au traité de paix et son entrée dans la Ligue des Nations nécessitèrent, pour la première fois, une définition officielle des ressortissants du Canada et de la nationalité canadienne, puisque certaines mesures adoptées par la ligue confèrent des droits et privilèges aux citovens ou sujets des pays qui en sont membres. Conséquemment, un Canadien fut défini par la loi 11-12 Geo. V, chap. 4, ainsi qu'il suit:

(a) "tout sujet britannique qui est sujet canadien aux termes de la loi sur l'immigration, chap. 27 des statuts do 1910, telle que jusqu'ici amendée; (b) "In femme de ce citoyen;

telle que junqui su anti-carricopeu.

(c) "totale proponeu de lor se de Canada dont le père était Canadien au moment de la naissance de cette personne ou à
l'agand des individus nés antérieurement à la précese les, toute personne dont le père possédait à l'époque de cetto naissance
torte les qualités d'un renortieurement à la précese les, toute personne dont le père possédait à l'époque de cetto naissance
torte les qualités d'un renortieuremen anneliers, soite le définition de cette le d'."

Au premier juin 1921, la population immigrée de naissance étrangère (890,282) comptait 690,638 individue ou 18-4 p. c. ayant atteint leur majortie et, par conséquent, susceptibles d'acquérir leur naturalisation, quoique certains de œux-ci ne résidassent pas au Canada depuis sesse longtemps pour acquérir ce droit. Parmi les 192,648 en état de minorité, 111,090 ou 57-6 p. c. avaient acquis la citoyenneté par l'effet des dispositions de la loi de la naturalisation régis-ant les enfants mineurs néa l'étranger de parents devenus canadiens par voie en aturalisation ou bien nés en pays étrangers de parents britanniques. De même les femmes des sujets britanniques ou des rescortisants du Canada, majeures ou mineures, et indépendamment de la durée de leur résidence au Canada ou dans les autres possessions britanniques, furent considérées comme naturalisées conformément à la loi qui les régit.

Droits politiques des étrangers naturalisés.—Au premier juin 1921, les naturalisés de l'une d'autre sexe figurant sur la liste décetorile ne représentaient que 8-4 pc. de la totalité de l'écetorat canadien. Dans la Saskatchewan, les naturalisés constituaient 29 p.c. de la totalité des citécyens des deux sexes aparte à voter aux décetions fédérales; cette propriorie descendait. À 27 p.c. dans l'Alberta, 19 p.c. au Manitoba, 10 pc. dans la Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peu moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut moins de 1 pc. dans Colombie Britannique, un peut de 1 pc. dans Colombie Britannique, un peut de 1 pc. dans Colombie Britannique, un peut de 1

En égard aux déplacements de frontières affectant maints pays européens comme conséquenes de la guerre, il est impossible de présente des comparaisons parfaitement exactes de la population immigrée née à l'étranger résidant au Canada lors du dernier recensement, avec la même catégorie de population dénombrée aux recensements antérieurs. On s'est efforcé toutefois de présenter dans le tableau 60 un aperuy de la population étrangère habitant au Canada en 1901, 1911 et 1921, classifiée selon le pays de sa naissance; on y a ajouté le nombre absolu et proportionnel de ceux avant acous la citorenneté canadieme lors de chaeum de ces recensements.

En 1901, il existait au Canada 278,449 individus nés à l'étranger, dont 153,908 ou 55-3 p.c. étaient alors naturalisés; en 1911, la population née à l'étranger représentait 752,732 individus, dont 344,557 ou 45-8 p.c. se proclamaient citoyens canadiens; enfin, en 1921, sur 890,282 personnes nées à l'étranger, 514,182 ou 57-8 p.c. étaient naturalisées.

LANGUE PARLÉE ET LANGUE MATERNELLE

Sous les rubriques "langue parlée" et "langue maternelle" la formule affectée au dénombrement de la population en 1921, comportait trois questions auxquelles devaient répondre toutes les personnes ágées d'au moins 10 ans, savoir: (a) Savez-vous parler anglais? (b) Savez-vous parler français? (c) Langue maternelle autre que l'anglais et le français?

Langage par16.—La langue parlée par les différents groupes ethniques constituant la population candienne âgée d'au moins 10 ans, au premier juin 1921, est présentée dans les tableaux 7 à 70 (tableaux d'ensemble) sous deux divisions principales, c'est-à-dire les personnes nées dans l'étendue de l'empire que l'on appelle "nées britanniques" et celles nées ailleurs que l'on appelle "nées à l'étranger". Pour chacune de ces deux catégories, la statistique nous indique le nombre, tant absolu que proportionnel, des individus de l'un et l'autre sexe et de chaque origine raciale qui parlent : (1) naglais seulement, (2) anglais et trançais seulement, (3) français seulement, (4) anglais plus une langue maternelle, (6) français plus une langue maternelle, (6) anglais et français plus une langue maternelle et (7) langue maternelle maternelle sement; dans ces tableaux cette classification est opérée d'abord par provinces puis par cités et villes ayant au moins 15,000 dmes.

Dans l'ensemble du Canada 84.79 p.c. de la population ágée de 10 ans et plus savait parler anaglais; parmi euvc-i siè-- 61 p.c. ne parlaient que l'anaglais et le français 9.49 p.c. parlaient l'anglais et le français 9.49 p.c. parlaient l'anglais et le français out-se leur langue maternelle crivino i de un pour ent pouvaient parler l'anglais et le français out-se leur langue maternelle. (Tableau 78, tableaux d'ensemble.) Ceux qui parlaient uniquement la langue française, au nombre de 877.341, représentaient légèrement plus de 13 p.c. de la population totale et 92 º p.c. de ceux-là vivaient dans la province de Québee, 3-5 p.c. au Nouveau-Brunsvick, 2-6 p.c. dans Ontario, enfin, un pen moins de 2 p.c. étaient disséminés dans les autres provinces. Le français est la seule langue connue de 46-58 p.c. de la population de la province de Québee ágée de 10 ans et plus, de 10-33 p.c. de la population de Nouveal-Brunsvick du même âge, et de 1.38 p.c. de la population de la Nouveal-Brunsvick du même âge, et de 1.38 p.c. de la population de la Nouveal-Brunsvich lu même âge. Dans nulle autre province cette proportion n'atténit l- p.c. de la population de valour de face.

Nous venous de voir que l'anglais est employé exclusivement par 58-51 p.c. de la population du Canada fagée de 10 ans et olus. Dans l'Île du Prince-Edouard 58-27 p.c. de la population de cet âge ne parle que l'anglais; cette proportion atteint 86-42 p.c. dans la Nouvelle-Ecoses, 82-19 p.c. dans la Ontario, 73-90 p.c. dans la Colombie Britannique, 67-65 p.c. au Nouvelle-Ecoses, 82-19 p.c. dans la Ontario, 73-90 p.c. dans la Colombie Britannique, 67-65 p.c. au Nouvelle-Ecoses, Brumswick, 66-20 p.c. dans l'Alberta, 61-07 p.c. au Manitoba et 58-59 p.c. dans la Saskatchewan; dans Québee, près de 12 p.c. de la population de cet âge ne parle que l'anglais. Parmi la population née britannique ignorant la langue anglaise, 94 p.c. sont d'origine française et presque tous demeurent dans la province de Québec. Sui tes 550,249 individus de 10 ans et plus nés à 16-tranger, 192,308 appartensient aux races britanniques et 637,851 aux autres races; environ 15 p.c. de ce derniers ignoraisent la langue anglaise. (Tablasur, 74 et 75).

Il est remarquable que les femmes et les filles de presque toutes les moes étrangères semblent avoir acquis la langue de leur pays d'adoption plus lentement que les hommes et les garçons; évidemment, œux-ci ont de plus grandes facilités qu'elles, parce qu'ils sont nécessairement en contact quotidien avec des personnes parlant l'anglais ou le françaite.

Langue maternelle.—Ainsi qu'on l'a dit plus haut, l'énumérateur devait se renseigner sur la langue maternelle de la population recensée. Par "langue maternelle" on entend la langue, le dialecte ou l'idiome dont se sert habituellement la personne recensée. Le dépouillement des réponses données à cette question par les personnes de 10 ans et plus (à l'exclusion des Indiens) a été opéré tant pour le Canada que pour chaque province.

En raison des nombreux changements effectués dans la carte de l'Europe après la grande guere, il était extrémement difficile d'opter un classification exacté de la langue maternelle solon le lieu de naissance; on a done couplé la langue maternelle et l'origine raciale de la population &gée de 10 ans et plus dans chaoue province. (Tableaux 80 et 81).

Presque partout, la classification selon la langue maternelle différencie des groupes ethniques, la principale exception à cette règle étant constituée par les gens syant l'anglàsic comme langue maternelle, puisque sous cette rubrique figurent des groupes ethniques sensiblement différents tels que les Anglàsi, les Irlandais, les Ecossais et les Gallois. Mais si l'anglais comme langue maternelle embrasse plusieurs races, c'est le contraire qui es produit pour le judéo-allemand (yiddish) qui n'est la langue maternelle que d'une partie seulement des Israélites, les autres étant classifies comme parlant le polonais, le ruses, l'allemand, l'anglais, etc.

D'autre part, il arrive assez fréquemment que l'anglais soit la langue maternelle de gens qui, du point de vue ethnique, appartiennent à l'Europe continentale. Par exemple, plus de 63,000 individus d'origine hollandaise ont indiqué l'anglais comme langue maternelle et il en tut ains deplus de 101,000 autres d'origine norvégienne et enfin de 8,000 autres d'origine sufócies. Il existe d'autres cas où la langue maternelle semble étre en désaccord avec l'origine ethnique, ainsi qu'on peut le voir par le tableau 81 (tableaux d'ensemble).

Considérant ensemble la population totale des neut provinces, on voit que 62-16 p.c. parlaient habituellement la langue anglaise, 26-64 p.c. la langue française, 2-78 p.c. l'Allemand et 2-84 p.c. l'un des dialectes slaves. La langue anglaise était la langue maternelle de 88-46 p.c. de la population de la Nouvelle-Ecoses agée de 10 aus et plus, 68 7-16 p.c. de la population du même âge de l'Ile du Prince-Eclouard, de 84-87 p.c. de la population du même âge d'Ontario, de 80-02 p.c. de la Colombie Britannisque, de 70-27 p.c. du Nouveau-Brunsveide, de 69-70 p.de l'Alberta, de 64-48 p.c. du Manitoba et de 61-08 p.c. de la Saskatchewan. Dans cette dernière province 13-35 p.c. de la population de 10 ans et plus avait pour langue maternelle l'allemand. Dans Québec le français est la langue maternelle de plus de 79 p.c. de la population de 10 ans et plus.

INSTRUCTION

Champ de l'investigation.—Les informations que l'on possède sur l'instruction de la population sont tirées des réponses faites à deux questions: (1) "sait lire," (2) "sait écrire". Les instructions données aux énumérateurs étaient les suivantes:

[&]quot;Si la personne sait lire en une langue quelconque, l'énumérateur inscrira dans la colonne 26 une réponse affirmative et si la personne sait pas live, une réponse ségative.
"Si la personne sait écrire en une langue quelconque, l'énumérateur écrira le mot "oui" dans la colonne 27 et le mot "nou" dans le cas contraire".

Dans les précédents recensements les statistiques de cette nature étaient présentées sous une rubrique unique—Instruction— et s'appliquaient à toutes les parties de la population ayant atteint ou dépassé l'Âge de cinq ans. Dans le déposillement de ce recensement on a créé deux rubriques, savoir: "Instruction" et "Analphabétisme", les tableaux 82 à 92 étant consacrés au premier sujet et les tableaux 93 à 99 au second.

Dans le but de permettre la comparaison avec les données recueillies aux recensements précédents sur le degré d'instruction de la population, certaines statistiques ont été compilées pour la population ágée de 5 ans et plus, classifice par certains groupes d'âge (Tableaux S5 à 87). Les statistiques des tableaux S8 à 91 concernent la population de 10 ans et plus classifiée par sexe, groupes d'âge, lieu de naissance et enfin par population urbaine et rurale dans chaque province.

En n'y faisant figurer la population que depuis l'âge de 10 ans on obtient deux avantages discribets, d'abord, on peut jeter un coup d'œil sur la fréquentation scolaire et ensuite, les statistiques sont comparables avec celles des autres pays.

Il est inutile de rappeler au lecteur que les indications qu'il puisera sous cette rubrique sont nécessairement quelque peu vagues. Il est très possible en effet que des gens déclarant savoir lire soient, en fait, incapables de lire un journal intelligiblement; quant à ceux qui déclarent savoir écrire, certains ne savent que signer leur nom.

ANALPHABÉTISME

Les statistiques relatives à l'analphabétisme chez la population âgée de 10 ans et plus sont présentées dans les tableaux 93 à 99, d'abord pour la Puissance entière puis par provinces, comtés ou divisions de recensement; enfin, dans les cités et les villes de 10,000 âmes et plus. La population qualifiée illettrée est celle totalement dépourvue de toute instruction.

Marge d'erreur.—Il est probable que les statistiques du recensement ne donnent pas le nombre total des illettrés, particulièrement parmi la population adulte, souvent confuse d'avoir à confesser son ignorance. D'autre part, on se demande si l'on ne devrait pas placer parmi les illettrés les personnes dont l'instructions se borne à "savoir live". Enfin, dans les régions où presque tout le monde sait lire et écrire, il est de permis de supposer que les énunérateurs se sont disparess de questionner les gens à cet égard, présumant que leur réponse serait affirmative. Il est don supposable qu'un certain monbre d'illettrés ait pu échapper au recensement. Par contre, il est également possible que les gens ne connaissant ni l'ure ni l'autre de nos langues officielles aient été considérés par certains énumérateurs comme ne sachant ni lire ni écrire, nonobstant le texte précis des instructions qui leur recommandait d'avoir égard à leur instruction dans une langue quelconque. Toutefois, comme il est évident que les mêmes erreurs ou inexactitudes ont été commisse dans les recensements précédents, les données recueillés procurent une base suffisamment exacte pour permettre de mesurer la décroissance de l'analphabétisme de éfende en décade.

Analphabétisme, par groupes d'âge.—La compilation de ces statistiques par groupes d'âge fait chirment ressortir le développement de l'instruction publique de décade en décade. L'Analphabétisme dans ces groupes d'âge décèle le manque d'écoles durant l'enfance de ce groupe. L'andiciration survenue dans l'instruction publique de chaque province peut se mesurer généralement au moyen du pourcentage d'illettrés dans chaque groupe d'âges. Par exemple, parmi la population née au Canada, les illettrés de 10 à 20 ans constitueint 2-47 p.c.; ceux de 21 à 34 ans, 3-15 p.c.; ceux de 35 à 04 ans. 6-24 p.c. et enfin, parmi les gens âgés de plus de 65 ans, 1-44 p.c. Dans la population née à l'étranger on trouve une disproportion beaucoup plus grande entre les illettrés jeunes et les illettrés adultes que parmi la population née soit au Canada soit dans les autres parties de l'empire britanquie. Che la population née soit au Canada soit dans les autres parties de l'empire britanquie. Che la population née soit au Canada soit cans les autres parties de l'empire britanquie. Che la population née soit au Canada soit complati 22-71, p.c. d'illettrés.

Illettrés nés au Canada, classifiés selon le lieu de naissance de leurs parents.—Les tableaux 44, 59 et 96 traitent de l'analphabétisme chez la population née au Canada, classifiée selon que les père et mère de l'illettré ou l'un d'eux seulement étaient nés au Canada, nés dans les autres parties de l'empire britannique ou nés à l'étranger. Le tàbleau 94 indique le nombre absolu et proportionnel des illettrés de 10 à 20 ans, puis de 21 ans et plus, classifiés selon le lieu de naissance de leurs parents. Le tableau 96 traite des mêmes illettrés résidant dans les cités de 10,000 âmes et plus.

Analphabétisme de l'électorat.—En 1921, on a édonombré dans les neuf provinces—les Indiens exceptés—4,709,815 pessonnes de 21 ans et plus dont 261,579 ou 5-49 p.c. étiant illettrés. Le pourcentage le plus élevé des illettrés adultes (5-57 p.c.) se trouvait dans le Nouvenu-Brunswick, suivi par Québec, avec 7-97 p.c. et le Manicho avec 7-70 p.c. L'état qui estir résume, par provinces, le nombre et le pourcentage des illettrés parmi la population âgée de 21 ans et blus en 1921.

Le tableau 98 est consacré à la population illettrée âgée de 10 ans et plus, classifiée selon qu'elle est née en territoire britannique (Canada inclus) ou à l'étranger, par sexe et par groupes d'âge, tout en distinguant les origines raciales.

Le tableau 99 traite de l'analphabétisme de la population indienne considérée séparément, par sexe et par groupes d'âge. Ces chiffres figurent dans les totaux de tous les tableaux, hormis le tableau 98

FREQUENTATION SCOLAIRE

La fréquentation scolaire est ici déterminée au moyen des données puisées dans le recensement de 1921, c'est-d-ine selon les réponses faites à la question posée à tous les enfants et adolescents de 5 à 20 ans, sur leur fréquentation de l'école entre le premier septembre 1920 et le premier juin 1921. Les instructions aux énumérateurs étaient ainsi libellées:

"Si l'enfant ou l'adolescent a fréquenté une école ou autre institution d'enseignement pendant une période quelconque entre le premier septembre 1200 et le premier jain 1921, l'énumérateur inscrira dans la colonne à ce destinée le nombre de moin qu'à duré cette fréquentation; dans le cas contraire, l'absence de fréquentation seclaire sers indiquée par un tiret."

Dans un but de simplification, les années scolaires dont nous allons parler seront appelées 1901, 1911 ou 1921, le cas échéant.

En 1911, on s'est renseigné, en procédant au recensement, sur la fréquentation de l'école par tous les enfants ágés de plus de cinq ans. Les résultats obtenus ayant démontré qu'un nombre considérable d'enfants de cinq ains fréquentaient l'école, l'on résolut d'exiger pour le sixtème recensement cette information, pour les enfants et adolescents entre les âges de 5 et 20 ans. Toutérois, cette statistique pour l'un et l'autre recensement est présentée de telle manière, que l'on peut aisément faire abstraction totale des enfants de 5 ans dans toute appréciation des résultats.

Lois provinciales régissant la présence des enfants à l'école.—D'une manière générale a comparaison de la fréquentation scolaire entre les différentes provinces ne peut se faire que pour les enfants de 7 à 14 ans, âges qui, partout, coîncident presque exactement avec la scolarité obligatoire, laquelle est ci-dessous indiquée.

lle du Prince-Edouard.—De 7 à 13 ans inclusivement; la fréquentation mensuelle doit atteindre 60 p.c. de la durée de l'enverture des classes

Nometic-Eccess.—De 7 à 1 sus dans les écoles revaleur, de 8 à 10 ans dans les villes et les cités. Les esfants de cre legadevent fréquenter legiblemente les écoles, ois trumbes, oit drivent faithement de divers de la comme del la comme de la co

Québre.—L'école n'est pas obligatoire.

Onizro.—

(a) Les cafants de 8 à 14 ans doivent aller à l'école chaque jour sans exception; entre 5 et 8 ans, l'école est facultative, mais esux qui se sont fait inscrire doivent assister assidument sux classes pendant toute l'année scolaire.

mais skill qui de gout inte interferé devent courtes constituires autre titues pentant tours in 1920 Medication des ses en mireratés ser le constituire de la commentation qualification de l'évolre que qui en sons stemples, en raison de d'evolre sons team à la finére entre la commentation qualification de l'évolre que qui en sons stemples, en raison de d'evolre sons team à la finére pentantière qualification de l'évolre que qui en sons stemples, en raison de d'evolre sons team à la finére state, en raison de d'evolre sons team à la finére state de l'évolre de la commentation qualification de l'évolre sons team à la finére state de l'évolre de la commentation que de l'évolre de l'év

nyant une population de 5,000 à mes ou plus, sont obligatoirement tenues d'organiser des classes spécialement dans ce but.

Les adolescents de 18 à 18 aux qui n'ont pas fréquenté l'école régulièrement junqu'à l'âge de 16 aux et qui n'ont pas
poussé leurs études junqu'à l'admission à l'universét doivent fréquente l'école padants 320 heures par an.

Manilobo.—Tous les enfants de 7 à 14 ans qui n'ont pas encere atteint à fin de leurs études doivent aussiner régulièrement à la fin de leurs études de l'esch. Un adant de plus de 12 ans prout être e termple pendant sin semaines par an, pendant lesquelles il pout travailler. Seul cette exception, il sel interdit de faire traviller les enfants de moine de 14 ans. La commission sociaire d'un district, possédant un fonctionnaire apécialement charge de serveiller l'assidié, puet obligire ne fantant à aller à l'école sique 18 age de 15 au commission sociaire d'un district, possédant un fonctionnaire apécialement charge de serveiller l'assidié, puet obligire ne fantant à aller à l'école sique 18 age de 15 au commission de l'autre de l'autre par l'autre de l'entre de

Saskatchenen.—Tous les enfants de 7 à 15 ans, qui n'ont pas dépassé le degré VIII doivent fréquenter l'école sans interruption. Le travail des enfants de moins de 15 ans est interdit. Les sourcis-muets de 8 à 15 ans doivent fréquenter une institution a unois sect mois son an.

Alberts.—Tous les enfants de 7 à 15 ans, doivent fréquenter l'école sans interruption.

Colombie Britsneique.—Tous les enfants de 7 à 14 ans inclusivement, doivent fréquenter l'école sans interruption pendant l'année scolaire.

Ce qui précède est relatif à la fréquentation obligatoire, cependant les lois scolaires de presque toutes les provinces continenant des dispositions accessiores, telles que un minimum de présence, mesure s'appliquant généralement aux enfants de 6 à 16 ans, ainsi que des lois sur l'instruction des adolescenta qui tendent à augmenter la durée de 18'ges coloire, au cours d'uquel les parents ou tuteurs qui négligent d'envoyer leurs enfants à l'école sont passibles de pénalités plus ou moins sévères.

Données comparatives.—Les tableaux 100 à 102 présentent les statistiques, pour l'ensemble du Canada, de la fréquentation scolaire des enfantes et adolescents de 5 à 19 ans, en les années 1901, 1911 et 1921. En comparant les chiffres du recensement de 1921 avec ceux de 1911 et 1901, il faut tenir compte de certaines considérations. Ainsi qu'on 1º alt flus haut, l'investigation du recensement de 1921 portait sur les neuf mois se terminant le 31 mai 1921, tandis qu'en 1911, cette période couvrait l'année scolaire 1910 et en 1901 les douce mois terminés le 31 mars 1901. On a extrait du recensement de 1901 ce qui se rapporte aux groupes d'âge de 5 à 9 ans et de 10 à 19 ans.

La population de 5 à 19 ans dénombrée au recensement de 1921 était de 2,768,728 Ames ou 31 - 5 p.c. de la population d'ége connu (8,767,208), comparativement à 2,168,937 ou 30 - 2 p.c. de la population d'ége connu de 1911 (7,169,960) et 1,748,741 ou 32 - 8 p.c. de la population d'ége connu de 1901 (5,322,238).

En 1901, 52-13 p.c. des 1,748,741 enfants et adolescents de 5 à 19 ans fréquentàrent l'école pendant une période quelconque; en 1911, on constatait une légère amélioration, ce pourcentage s'étant élevé à 52-88 p.c. de la population de ces âges (2,163,937) mais en 1921, 61-32 p.c. des 2,763,732 enfants et adolescents du même âge fréquentaient l'école, soit un gain de près de 81 p.c. sur la recensement précédent. Il est également à remarquer que le pourcentage de la fréquentation scolaire chez les garyons de 5 à 19 ans, qui était tombé en 1911 à 52-15 p.c., c'est-à-dire au-dessous de 1901, remontait à 60-79 p.c. en 1921. Quant aux filles de 5 à 19 ans, le pour

centage de celles qui fréquentaient l'école est monté de 51.99 p.c. de l'ensemble des filles de cet âge en 1901, à 53.63 p.c. en 1911 et à 61.86 p.c. en 1921.

Dans l'ensemble du pays, à l'exclusion du Yukon et des Territoires du Nord-Ouest, sur 1,000 enfants de 7 à 14 ans, 88 ont fréquenté l'école plus ou moins longtempe en 1921, au lieu de 728 en 1911, ou mieux, afin que cette progression apparaisse d'une manière plus frappante, on peut dire que le nombre des enfants de 7 à 14 ans 1911 allant pas à l'école est tumbé de 220 par 1,000 en 1911 à 114 en 1921. Et cotte anciioration se manifeste dans chacune des provinces. En 1911, c'était l'île du Prince-Edouard qui se plagait au premier rang, avec 84-60 p. de see enfants de 7 à 14 ans fréquentant l'école, mais en 1921 cette place revient à Ontario dont 91-85 p.c. des senfants de 7 à 14 ans passaient par l'école cette année-la, la Colombie Britannique vient ensuite avec 90-02 p.c. Les plus grands progrès réalisés au point de vue de la fréquentation scolaire ont été accomplis dans les provinces des prairies et la plus minime amblioration s'est manifestée dans les provinces maritimes, mais il est juste de remarquer qu'en 1911 Pile du Prince-Edouard, la Nouvelle-Eccesse et le Nouveun-Eurosvick the énféciaient d'une assituité soolaire dépassant S0 p.c. tandis que la même année, l'Alberta restait au-dessous de 63 p.c., la Saskatchewan n'atteinait bas 67 p.c. et la Manichon en dénassaire uiveire 74 p.c. des enfants d'éace scolaire.

Sans y comprendre ni les Indiens, ni la population des territoires, le Canada, en 1921, comptait 2,728,524 enfants et adolescents de 5 à 19 ans inclusivement, dont 88.5 p.c. étaient nés au Canada, 5.6 p.c. dans les autres parties de l'empire britannique et 5.9 p.c. nés à l'étranger, c'est-à-dire que plus de 94 p.c. de la population de ces groupes d'âge étaient sujets britanni-Parmi les enfants et adolescents nés au Canada, 62.93 p.c. ont paru à l'école durant une période quelconque; ce pourcentage descend à 49.77 pour les enfants et adolescents nés dans les autres parties de l'empire britannique et à 54.75 pour ceux nés à l'étranger. Si nous les classifions maintenant selon la durée de leur présence à l'école nous obtiendrons les chiffres suivants; avant fréquenté l'école de 1 à 3 mois; nés au Canada 2-66 p.c.; nés dans les autres parties de l'empire britannique 1.27 p.c., nés à l'étranger 3.30 p.c.; de 4 à 6 mois de présence: nés au Canada 4.75 p.c., nés dans les autres parties de l'empire britannique, 2.53 p.c., nés à l'étranger 7.68 p.c.; présence de 7 à 9 mois: nés au Canada 55.52 p.c., nés dans les autres parties de l'empire britannique 45.57 p.c., nés à l'étranger 43.77 p.c. Quelle que soit la période que l'on envisage la proportion des autochtones est sensiblement supérieure à celle des enfants des immigrés. On ne constate presque aucune différence appréciable entre les garçons et les filles, au point de vuc de l'assiduité scolaire, toutefois il existe un léger avantage en faveur des filles.

L'état qui suit indique le nombre absolu et proportionnel des enfants de 7 à 14 ans (à l'exclusion des Indiens) qui, dans chaque province, ont fréquenté l'école pendant une partie ou durant la totalité de l'année scolaire. Sur les 1,508,946 enfants de 7 à 14 ans peuplant les neuf provinces (à l'exclusion des Indiens) 89-10 p.c. ont passé par l'école plus ou moins longtemps et 80-25 p.c. d'entre eux y sont demeurés de 7 à 9 mois. On peut voir que le Nouveau-Brunswick, Québec, la Nouvelle-Écosse et l'Île du Prince-Edouard, dans est ordre, possèdent le plus grand nombre des sufinats d'âge scolaire s'étant teus à l'écart de l'école.

Sur les 1,344,371 enfants de 7 à 14 ans ayant fréquenté l'école pendant une période quelconque durant les neuf mois écoulés entre le premier septembre 1920 et le premier jun 1921, plus de 90 p.c. ont assité aux classes pendant 7 mois ou plus. Le pourcentage le plus élévé d'assiduité scolaire pendant cette période appartient à la Colombie Britannique, avec 94-61 p.c., suivie par Québec avec 94-50 p.c. et Ontario avec 94-07 p.c. Dans l'île du Prince-Edouard, le Nouveau-Brunswick et la Saskatchewan, moins de 80 p.c. des enfants de ce groupe d'âge inscrits à l'école, suivaient les classes pendant au moins 7 mois.

En ce qui concerne les enfants âgés de 5 ans, c'est dans les provinces d'Ontario, de Québec et de la Nouvelle-Ecosse, dans cet ordre, qu'ils montrent la plus grande assidiuité à l'école, le pourcentage étant minime dans la Colémbie Britannique, l'Alberta, le Manitoba et le Noúvesu-Brunswick. La proportion des garçons et des filles fréquentant l'école est sensiblement égale à tous âges, hormis le groupe de 15 à 19 ans où la proportion des garçons n'est que de 23 p.c. de la totalité des garçons de cet âge, tandis qu'il est de 26.78 p.c. chez les filles. On remarque aussi que le pourcentage de la présence à l'école des enfants de moins de 6 ans était en 1921 Régèrement inférieur à celui de 1911 quant aux garçons, tandis qu'un contraire, il était quelque pui supérieur pour les filles. Si l'on considère les enfants de 6 à 9 ans, on voit que le pourcentage de leur assiduité scolaire, qui était en 1921 de 70-9 p.c. pour les garçons et doit es garçons et de 70-59 p.c. pour les filles, dépassait 79 p.c. pour les deux sexes en 1921. Dans le groupe de 10 à 14 ans, l'assiduité scolaire, qui était de 79 p.c. pour les garçons et 30 p.c. pour les filles, est montés 48 pc., pour les deux sexes. Nous donnons ci-clessous le pourcentage des enfants et adolessents de 5 à 19 ans fréquentant l'école par groupes et d'ége, par sexe et par provinces.

Si 10n établit une distinction entre les écoles urbaines et les écoles rurales, on voit que le pourcentage des enfants de 7 à 14 ans qui les ont fréquentées pendant 7 mois ou plus en 1921, dans chaque province, s'établit ainsi qu'il suit: Ils du Prince-Edouard, rurales 74 91 p.e., urbaines 95-03 p.e.; Novuelle-Ecoses, rurales 79-85 p.e., urbaines 90-77 p.e.; Novueu-Branswick, rurales 72-23 p.e., urbaines 96-77 p.e.; Québec, rurales 91-91 p.e., urbaines 90-77 p.e.; Ontario, rurales 90-84 p.e., urbaines 90-65 p.e.; Maintoba, rurales 84-20 p.e., urbaines 96-85 p.e.; Saskatchewan, rurales 60-88 p.e., urbaines 90-40 p.e.; Octobib Britannique, rurales 92-82 p.e., urbaines 96-65 p.e.

Toutefois, il ne faut pas perdre de vue que dans la Colombie Britannique on considère comme rurales de nombreuses municipalités qui, eu égard à la densité de leur population ent plutôt un caractère urbain, tandis qu'au contraire dans les provinces des prairies de petites agglomérations de moins de 100 âmes sont qualifices urbaines. En l'absence de toute règle uniforme dans les provinces, définissant les cités, les villes et les villages, on a adopté comme règle de considèrer comme urbaines la population des cités, des villes et des villages incorporés, tout le surplus de la population étant rurale.

AVEUGLES ET SOURDS-MUETS

La dernière section de ce volume est consacrée aux aveugles, aux sourds-muets et aux aveugles-sourds-muets dénombrés au sixième recensement lu Canada, d'est-à-dire le premier juin 1921. Leur nombre étant relativement minime, les commentaires sont limités à une brève explication de cette opération et à une analyse surefricielle des données.

Le recassement a dénombré 4,396 aveugles, 5,334 sourds-muets, plus 42 personnes qui étaient tout à la fois aveugles, sourds et muettes, soit autotal, 9,772 individus de ces trois catégories vivant dans la Puissance. Parmi les aveugles, 2,503 appartenaient au sexe masculin et 2,886 au sexe féminin; parmi les sourds-muets, 2,850 appartenaient au sexe masculin et 2,486 au sexe féminin. Les tableaux d'ensemble présentant ces statistiques ne different pas de ceux compilés sur le recessement de 1911; cependant, cette information fut colligée en 1921 d'une manière différente. Le recessement de 1911 et tous ceux qui l'Ont précédé, comportaient une colonne spéciale réservée à cette information, sur la formule consacrée à la population; au dernier recessement, la octifé et la surdi-mutté furent omises de la formule principale et les foumdratures durent inscrire sur une formule spéciale le nom, l'âge, le sexe et l'adresse postale des aveugles et des sourds-muets, ainsi qu'une référence à la page et à la liège de la formule de la population sur laquelle cette personne était portée avec les autres membres de sa famille, conformément aux prescriptions de la loi de la statistique.

Définition des termes.—En 1921, les instructions aux énumérateurs, imprimées sur la formule complémentaire, étaient ainsi libellées:—

"Artugles.—Considere comme aveugle toute personne ayau la vue trop basse pour pouvoir lies, même avec des insector; commit vue relates ha edessons de lé san con adultes literités, seront considérés comme a veugles cour qui sont intorpables de distinguir le considération de la considération de la considération de la comme de la comme de la comme de la comme comme comme comme continguir le la comme comme

De plus, l'énumérateur était requis de porter également sur la formule consacrée à la population, les noms de toutes les personnes figurant sur cette formule spéciale, ainsi que tous les détails les concernant.

Exactitude des données.—Il est probable que le nombre des aveugles et des sourds-muets relevés par le recensement est légèrement inférieur à la réalité, en raison de la répugnance des parents à faire l'aveu de ces infirmités, particulièrement si elles sont héréditaires. Mais nonobstant cette tendance très naturelle à la dissimulation, les listes d'inscription des différentes institutions affectées soit aux aveugles, soit aux sourds-muets, nous permettent de corroborer les chiffres du recensement. Au cours de l'année scolaire 1920-1921, les écoles de cette nature instruisaient 425 aveugles et 1,094 sourds-muets. En présumant que tous ceux-ci se plaçaient entre les âges de 10 à 24 ans, ces chiffres se comparent favorablement avec ceux du recensement lesquels indiquent 527 aveugles et 1,766 sourds-muets des mêmes âges. Assurément ces chiffres ne prouvent pas nécessairement la parfaite exactitude du dénombrement, mais ils indiquent néanmoins que les énumérateurs n'ont pas négligé cette partie de leur tâche. D'ailleurs il ne faut pas oublier que le recensement du Canada s'effectue sous le système de jure, sous lequel chaque personne doit être recensée à son domicile. Cela étant, les parents ou tuteurs des aveugles ou sourds-muets pensionnaires dans une institution fournirent à l'énumérateur les informations relatives à cet infirme, tandis que, d'autre part, les autorités de ces institutions fournissaient une liste complète des infirmes confiés à leurs soins, avec indication de leur domicile. Les informations fournies par ces institutions dont les directeurs avaient été nommés agents officiels du recensement, furent, par les soins du Bureau Fédéral de la Statistique, soigneusement contrôlées, au moyen des formules supplémentaires dont il vient d'être parlé, certaines corrections étant faites, le cas échéant.

Pour l'ensemble de la Puissance, en 1891, il existair 7 aveugles par 10,000 habitants, mais on rien touvair plus que é en 1901, 4 pen 1911 et 5 en 1921. [Onnant aux courds-ments, au nombre de 10 par 10,000 âmes en 1891, leur proportion montait à 11 - 6 par 10,000 êmes (mais à 6 - 4 en 1921). L'augmentation considérable du nombre des aveugles en Nouvelle-Ecosse est due dans une certaine mesure à l'explosion du vapeur Mont Blanc, le 6 décembre 1917, qui coûta la vie à 1,630 personnes et en frappa 41 de écétif permanente. En outre, une portion considérable de l'accroissement du nombre des aveugles entre 1911 et 1921 est attribubble à la guerre.

Division No. 17 comprises the remainder of the province consisting of northern parts; Indian Reserves

Long Lake, Chipewayan, Little Red River, Boyer River, Upper Hay River, Wabaska, Fort Vermilion.

DIVISIONS DES PROVINCES DES PRAIRIES POUR FINS DE RECENSEMENT

Les provinces du Manitoba, de la Saskatchewan et de l'Alberta ne possédant pas de divisions territo-riales comparables aux comtés des provinces de l'est du Canada, il n'était pas possible de comparer les raises comparances aux comités des provinces de lest ou u-seans, il n'étair pas possible de Comparar les données d'un recessement quéconque dans les régions trarles, avec celles des recessements antôrieurs, la seule comparaison praticable embrassant la province entière. Pour obvier à cet inconvénient, le Bureau a divisé ces provinces en "division de recessement" constituées au moyor d'un certain nombre de municipalités rurales, de districts d'améliorations locales, de cifés, de villes et de villages incorporés. Ces "divisions de recessement" ont été constituées de telle pour qu'elles puissent être subdivisées,

lorsque leur population se sera accrue, sans détruire les facilités de comparaison de leurs fluctuations, au

point de vue population et agriculture, révélées par les recensements décennaux et quinquennaux.

Sur les cartes ci-jointes, les limites des divisions sont figurées par des lignes rouges, celle des municipalités qui sont contenues dans les divisions par d'épuisses lignes noires, et celles des cantons par de mincos lignes noires.

ignos anoximbres entourés d'un cercle rouge sont les numéros donnés aux divisions; les chiffres en noir sont les numéros des municipalités ou des districts d'améliorations locales (D.A.L.); ils correspondent aux numéros sous lesquels les données de recensement relatives à ces territoires figurent dans les tableaux. Lorsque la numériopilités a un nom, ce nom accompagné d'un numéro, est imprimés sur la marge des tableaux.

taoieaux.
On trouvera dans la liste qui suit l'énumération des municipalités rurales, par nom et numéro (ce dernier entre parenthèses) ainsi que les cités, villes et villages composant chacune des "divisions de recensement". Les districts d'améliorations locales et les unités des territoires inorganiesé et les Saskatchewan et de l'Alberta sont indiqués simplement par un numéro.

Division N° 1.—Elle comprend les municipalités de: Birch-River (1), Hanover (2), La Broquerie Piney (4), Ste-Anne (5), Sprague (6), Stuartburn (7), Taché (8); Parties inorganisées à l'est du méridien principal, entre les cantons 3 et 10 (9).
